Introduction

VAF Instruments MidFlow®/HiFlow® positive displacement type liquid flowmeters are used in continuous metering applications, in-line blending processes and batch applications. MidFlow®/HiFlow® flowmeters have a simple, rugged design. With only few almost frictionless moving internal parts there is hardly any wear in the flowmeter which safeguards a typical long lasting lifetime. MidFlow®/HiFlow® meters have no mechanical seals saving you from regular maintenance and possible leakage of process liquids into the environment. The flowmeter is driven by the process liquid which makes it suitable for distant locations without power supply. The high accuracy of the flowmeter (better than 0.1% and repeatability 0.05%) is not influenced by process pressure or temperature, mechanical pipe strain or liquid turbulence and therefore straight inlet and outlet pipe pieces are not required.

Experience in flow measurement

In 1938 VAF Instruments started as a manufacturer of petrol delivery pumps. The flowmeters made by VAF for this pump already had to have the highest accuracy and had to meet the demands of the board of weights and measures. Innovation and research over the past 75 years helped VAF to make new types of flowmeters bearing in mind customer requirements and the need for accurate flow measurement.

VAF Instruments flowmeters are available in sizes from 8 mm up to 300 mm (1 l/hr up to 960 m³/hr). MidFlow®/HiFlow® flowmeters cover the middle and high part of this range.

Available MidFlow®/HiFlow® meters

MidFlow®/HiFlow® flowmeters are available in connection sizes from 25 mm up to 300 mm representing maximum flow ranges from 160 l/min up to 16000 l/min. A choice of material is available with ductile iron, steel and stainless steel. For registration of the measured amount of liquid, VAF MidFlow®/HiFlow® meters can be fitted with various combinations of counters and pulse transmitters.

Liquids

VAF positive displacement flowmeters series MidFlow®/HiFlow® are suitable for a wide range of liquids. Because liquids with higher viscosities do not degrade the accuracy of the sliding vane flowmeter, it is possible to use only one flowmeter for various liquids.

MidFlow®/HiFlow® meters are used for acids, alkalines, cleansing liquids, solvents, water, edible oils and fats, liquor, glucose, paint, all petrochemical liquids from LPG to bitumen, alcohol, printing ink, glue and many other organic and inorganic liquids.

Special versions

This brochure comprises only VAF Instruments' standard delivery program. Special flowmeter variants can be offered as tailor-made solutions.

Consult VAF Instruments for further information.

MidFlow®/HiFlow® are registered trade marks of VAF Instruments B.V.

Principle of operation

VAF Instruments positive displacement flowmeters operate on the sliding vane principle. The meter consists of a specially shaped housing in which a rotor can rotate freely.

Two pairs of vanes are placed into four slots in the rotor. Each pair is positioned by a rod and can move in and out of the rotor. The radial movement of the vanes is guided by the special inner shape of the housing. This patented construction provides a constant seal between the inlet and the outlet of the meter. The incoming liquid forces the rotor to rotate. The rotation of the rotor is transferred via a magnetic coupling to a read out device. This can be a counter in any desired engineering unit or a pulse transmitter for remote read out, flow data processing or connection to a process computer.

Fig. 1 Sectional view

Features & benefits

Features	Benefits
High capacity and rangeability	One meter for a wide range of flows
	Lower investment
High accuracy	Exact registration of transferred amount of liquid
	No loss of valuable raw material
Design simplicity	Easy to service
	No complex replacement parts
	Low operation cost
Accuracy not degraded by: process pressure / process temperature / liquid viscosity / liquid conductivity / pipe strain / flow pattern (turbulence)	Easy to operate because no need for external settings saving time in operation and training
	One single meter model is suitable for different liquids resulting in a lower investment
	No straight pipe required before or behind meter thus less space required
Rugged design	Easy to integrate in compact systems
	Space saving
Certified by European Classification Authorities (MID - approval) for custody transfer applications	Calibration according standard procedures
	Time saving
Constructed to CE standards	No special adjustments necessary
From ISO 9001 registered company	Assured product quality
	Less wear
	Long lifetime
Few internal parts	Low operation cost
	No auxiliary power needed
Measurement driven by liquid	Suitable for many remote locations
	Standard flowmeter suitable for hazardous areas
Local and/or remote registration with standard counters and Ex pulse transmitters

Typical calibration curves

VAF Instruments flowmeters perform liquid measurement with the highest accuracy. This graph shows typical calibration curves for liquids with different viscosities. Consult the factory for other values.

Flow ranges

To select the appropriate meter size for your process the graphs must be used. The data in these graphs only refer to standard flowmeters used on Newtonian liquids. Consult VAF Instruments for viscosities higher than shown in the graphs. Lower minimum capacities are possible dependent on liquid viscosity and required measuring accuracy.

Flowrate - pressure drop viscosity relation

These graphs show the pressure drop across the flowmeter as a function of the flowrate and the viscosity of the liquid. The sloping lines are lines of equal viscosity. The curve at the top of the graphs represents the maximum allowable pressure drop.

Technical specification

Note

For liquids with viscosities below 0,5 mPa.s with poor lubricating properties, or flowmeters that are running continuously it is also advisable to reduce the maximum flow, to prevent excessive wear of the vanes. A general rule is to reduce the maximum capacity to 75% of the value specified in the table.

Lower minimum capacities are possible dependent on liquid viscosity and required measuring accuracy.

Consult VAF Instruments on application.

Note: 1 cSt= 1 mPa.s if specific gravity is 1,0

MidFlow[®]

Meter size DN 25 mm: 100% = 160 l/min

Meter size DN 40 mm: 100% = 250 l/min

Meter size DN 50 mm: 100% = 500 l/min

Meter size DN 80 mm: 100% = 1900 l/min

Meter size DN 100 mm: 100% = 2750 l/min

HiFlow®

Meter size DN 150 mm: 100% = 4600 l/min

Meter size DN 200 mm: 100% = 8000 l/min

Meter size DN 250 mm: 100% = 12500 l/min

Meter size DN 300 mm: 100% = 16000 l/min

Options & accessories

Counters, pulse transmitters and accessories

VAF MidFlow®/HiFlow® meters can be fitted with various combinations of counters and pulse transmitters. All can be calibrated to read in litres, cubic meters or gallons. The following meter mounted counters and pulse transmitters are available:

Key resettable totaliser

For simple totalising jobs. Direction of reading from the top of the flowmeter. An inductive pulse transmitter can be installed in the counter adapter as optional extra.

Resettable flowmeter register

For registering delivered or transferred quantities per job and in total. Optionally available with extension between meter body and counter. Combinations with pulse transmitters are possible.

Batch counter

Electrical or pneumatic 2-stage knockoff. Optionally available with extension between meter body and counter. Combinations with pulse transmitters are possible.

Incremental pulse encoder

Dual channel optical pulse transmitter (EEX d IIB T6). Directly connected to flowmetershaft.

Ticket printer

Records and prints liquid deliveries and transactions. For use with reset and preset counters. Accumulative or zero start models available.

Calibration adapter

With pulse transmitters for remote flow monitoring and control. Pulse generators used are inductive proximity switches acc. NAMUR DIN 19234.

Pulse discriminator

(DIN rail mounting) to prevent pulse signal errors caused by pipeline vibrations and flow pulsations, or where other unsteady flow conditions would prevent smooth rotation of the meter. For use with 2 inductive pulse transmitters.

General

- Liquid filter/air vent;
- Appropriate liquid filtering is essential for protection of the flowmeter;
- Cooling rings for protection of the counting mechanism against operating temperatures above 120°C;
- Material certificate acc. EN 10204 3.1;
- Custody transfer accuracy certification;
- Special adaptations for accurate measurement of liquids with very high or very low viscosities, e.g. molasses or LPG;
- Helium leak-test when volatile liquids must be measured;
- Heating covers;
- Counter extension between counter and meter body for easier reading on loading platforms etc. Extension length up to 3 metres;
- Automatic temperature compensation;
- Internal flushing bores. Prevent deposits when crystallising liquids must be measured;
- Stainless steel encapsuled magnet coupling between meter body and counter adapter. Prevents corrosion by aggressive process liquids.

Electronic signal processing instrumentation

VAF Instruments offers a complete range of microprocessor controlled, analogue and digital instruments for indicating, totalising, registering and controlling liquid flows. Electronic instruments are available as modular plug-in units or in housings for wall or flush panel mounting. Output options for a number of instruments provide interfaces to chart recorders, printers, alarms and distributed control networks. VAF's engineers will be pleased to assist you in working out customized flow control systems in accordance with your requirements. At the present time our basic series of electronic flow signal processing instrumentation comprises:

- Flow computers;
- Multifunction flow controllers;
- Flow totalisers with optional temperature compensation;
- Batch controllers;
- Ratio controllers;
- Pulse amplifiers/pulse discriminators;
- Power supplies;
- Scalers;
- Frequency-to-current converters.

Applications

Some of the many applications are:

- Fuel consumption measurement of combustion engines and oil burners;
- Blending of additives in the process industry;
- Fuel oil bunkering and blending;
- Addition of catalysts to chemical reactors;
- Dyeing yarn, leather, plastics, etc.;
- Coating of sheet materials;
- Injection of oils and fats in the foodstuffs and animal feed industries;
- Flow control of dosing pumps;
- Dosing of additives in cement concrete preparation;
- Measurement of liquid movement in hydraulic systems;
- Accurate measurement of viscous liquids at low flowrates;
- Dosing of liquids in the paint, tobacco and beverage industries.

Dimensions

All dimensions apply to flowmeters with DIN PN 10/16/25 flanges.

Dimensions of flowmeters with other pressure rating are available on application.

All dimensions are in millimetres.
