HOERBIGER
ORIGA

HOERBIGER-ORIGA is a manufacturer and supplier of pneumatically driven components and systems designed to solve movement tasks for a variety of branches of machine construction and automation engineering. Special products and solutions for hazardous areas compliment the extensive programme.

Area's of competence

in welding technology

in the automobile industry

in the paper industry

in clean room technology

Our Service

HOERBIGER-ORIGA offers its partners competent, on-site support world-wide. Your HOERBIGER-ORIGA partner provides you with professional consultation and detailed technical support quickly and efficiently. Attentately you may obtain data relevant to your needs from our web site.

Technical data sheets as well as 2D and 3D drawings of our entire standard components are available in nearly every major CAD format.

You can also receive additional information from our technical catalogues, which are also available in electronic format either on CD ROM or from our homepage on the Internet.

How do piezo valves work?

Design and function

The central element is a Piezo-ceramic bending element which is built up of several layers, rather like a bimetallic strip. When an electrical voltage is applied, this element bends a few hundredths of a millimetre. This bending allows air to enter the piezo valve through port 1 to port 2 (Fig. 2). In the unactuated mode, the air can flow from port 2 to port 3 (Fig. 1). Depending on the voltage applied, the lesser or greater bending of the element generates an analogue pressure signal at port 2.

The piezo valve can therefore be used either as a switching valve or as a proportional valve. Optimized versions for either switching or proportional use are available.

When the P8-valve (Fig.3) is electrically actuated (ON-condition), the signal that is filtered and prepared by the control electronics opens the supply air seat in the piezo valve. The activated control circuit actuates the integrated valve – air flows from 1 to 2. A pressure regulator and a micro-filter are connected in series before the piezo valve.

In the following configurations piezo valves can be supplied for use in modern actuators.

Supply of P9 or P10 piezo chips as switching or proportional pilot valves

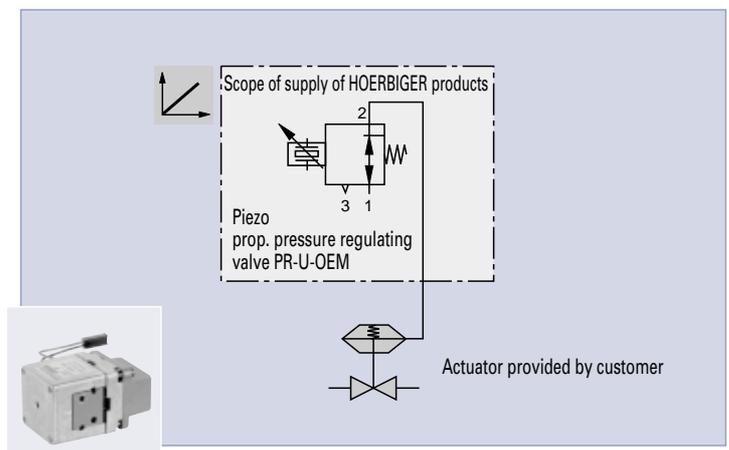

These provide the user with the highest degree of flexibility in the design of dedicated digital or analog actuator systems (IP converter with amplifier) as stand-alone devices or as part of large-scale positioning systems.

Supply of P20-OEM digital piezo valves consisting of piezo chip (pilot valve) and volume amplifier

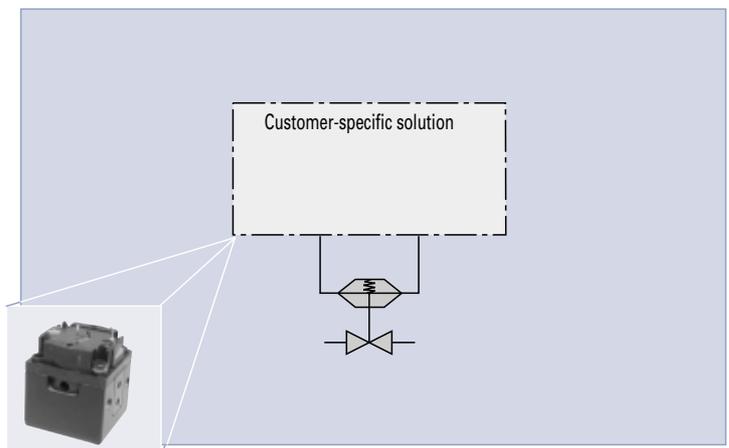

Supply of analog PR-U-OEM piezo valve consisting of piezo chip (pilot valve) and proportional main valve

Customer-specific solutions

Complete development and delivery of customer-specific actuator control systems as part of a joint development project.

HOERBIGER Interface provides a comprehensive support package for the installation and application of all variants.

Nominal voltage	U_N	V DC	24
Capacity	C	nF	< 100
Switching energy	E	mWS	0.014
Holding energy	P	W	0
Duty cycle	ED	%	100
Connection			Cable 300 mm long
Switching time	t_{ON}	ms	< 20 (10% of discharge pressure)
	t_{OFF}	ms	< 20 (90% of discharge pressure)
Electrical protection		IP	20 ⁽²⁾

⁽¹⁾ outlet air not included

⁽²⁾ not suitable as safety valve with 100% ED

3/2 Way Piezo Valve Serie P20-OEM NW 2

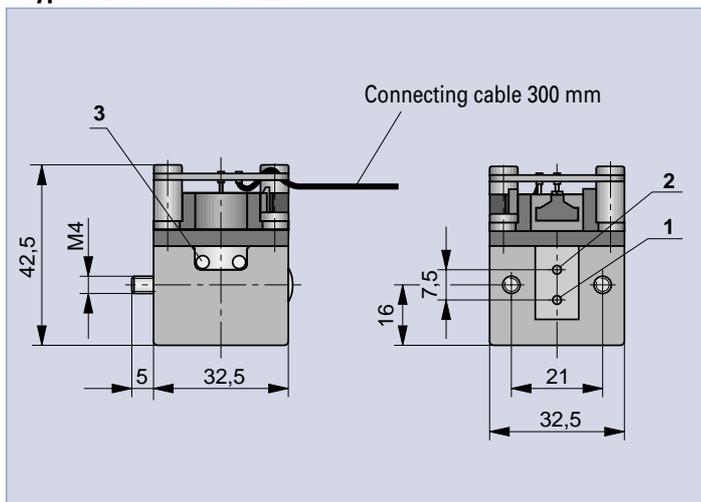

Versions

- normally closed (NG)
- normally open (NO)

Note:

The valve for the P20-OEM series fulfils the requirements for approval as an intrinsically safe device when used with an appropriate controller.

Type: P20 381RF-.-COEM

Base plate see page 31

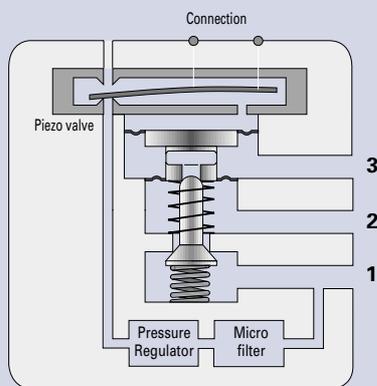

Pressure Regulating Valve Series PR-U-OEM NW 2 and G1/8

Proportional valve with Piezo pilot

Note:
The valve for the PR-U-OEM series fulfils the requirements for approval as an intrinsically safe device when used with an appropriate controller.

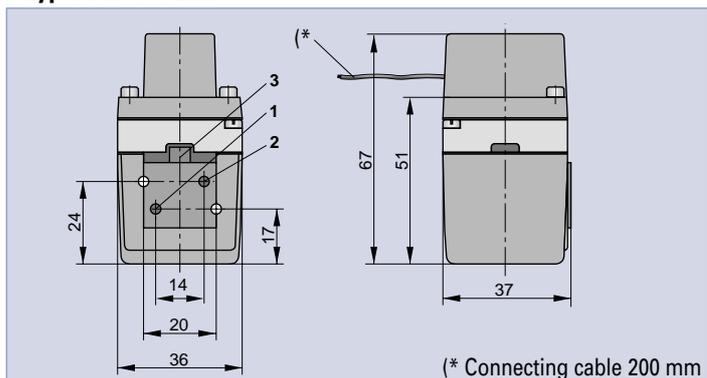

A piezo valve is used as the pilot control element. The piezo valve generates a pilot pressure in the pilot chamber of the main valve proportional to the control voltage.
The supply for the piezo valve is tapped off from the control air connection 1 and passed through a pressure regulator and filter.

1 = Pressure supply (P)
2 = Outlet (A)
3 = Exhaust (R)

Pressure Regulating Valve Type: PR-U-OEM

Series PR-U-OEM – NW 2.5

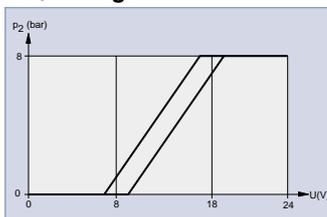

Characteristics	Symbol	Unit	Description
General Features			
Type			Membrane pressure regulating valve, pneumatic pilot control with piezo valve, some overlap
Mounting			Flange (see dim. drawing)
Connection			Flange
Port size			NW2.5
Weight (mass)		kg	0.100
Flow direction			ON: from 1 to 2 OFF: from 2 to 3 ⁽¹⁾
Installation			In any position
Medium and ambient temperature range	$\vartheta_{\text{min. / max.}}$	°C	-30 to +80 Note: When using below freezing point it is necessary to consult us.
Medium			Dry or filtered air (30 μ), no or minimal oil mist lubrication (max.30mg/m ³)
Pneumatic Characteristics			
Nominal pressure	$p_{\text{min. / max.}}$	bar	6
Operating pressure	$p_{\text{min. / max.}}$	bar	1.5 – 10
Nominal flow	Q_N	l/min	200 (from 6 to 5 bar)
Nominal size		mm	2.6
Electrical Characteristics			
Input voltage	U	V DC	0 – 24 ⁽³⁾
Capacity	C	nF	< 100
Switching energy	E	mWS	0.014 (from 0 to 24 V)
Holding energy	P	W	0
Connection			Connecting cable 200 mm 2-pin AMP connector Grid size 2.54
Electrical protection		IP	20

⁽¹⁾ outlet air not included

⁽²⁾ The device should only be used in a closed control loop.

A 0-24 V DC controller should be provided (see U/P diagram).

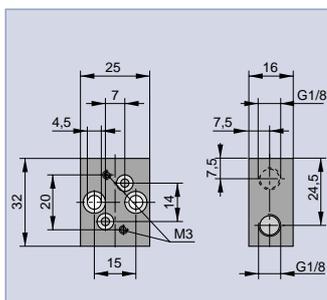

U/P-Diagram

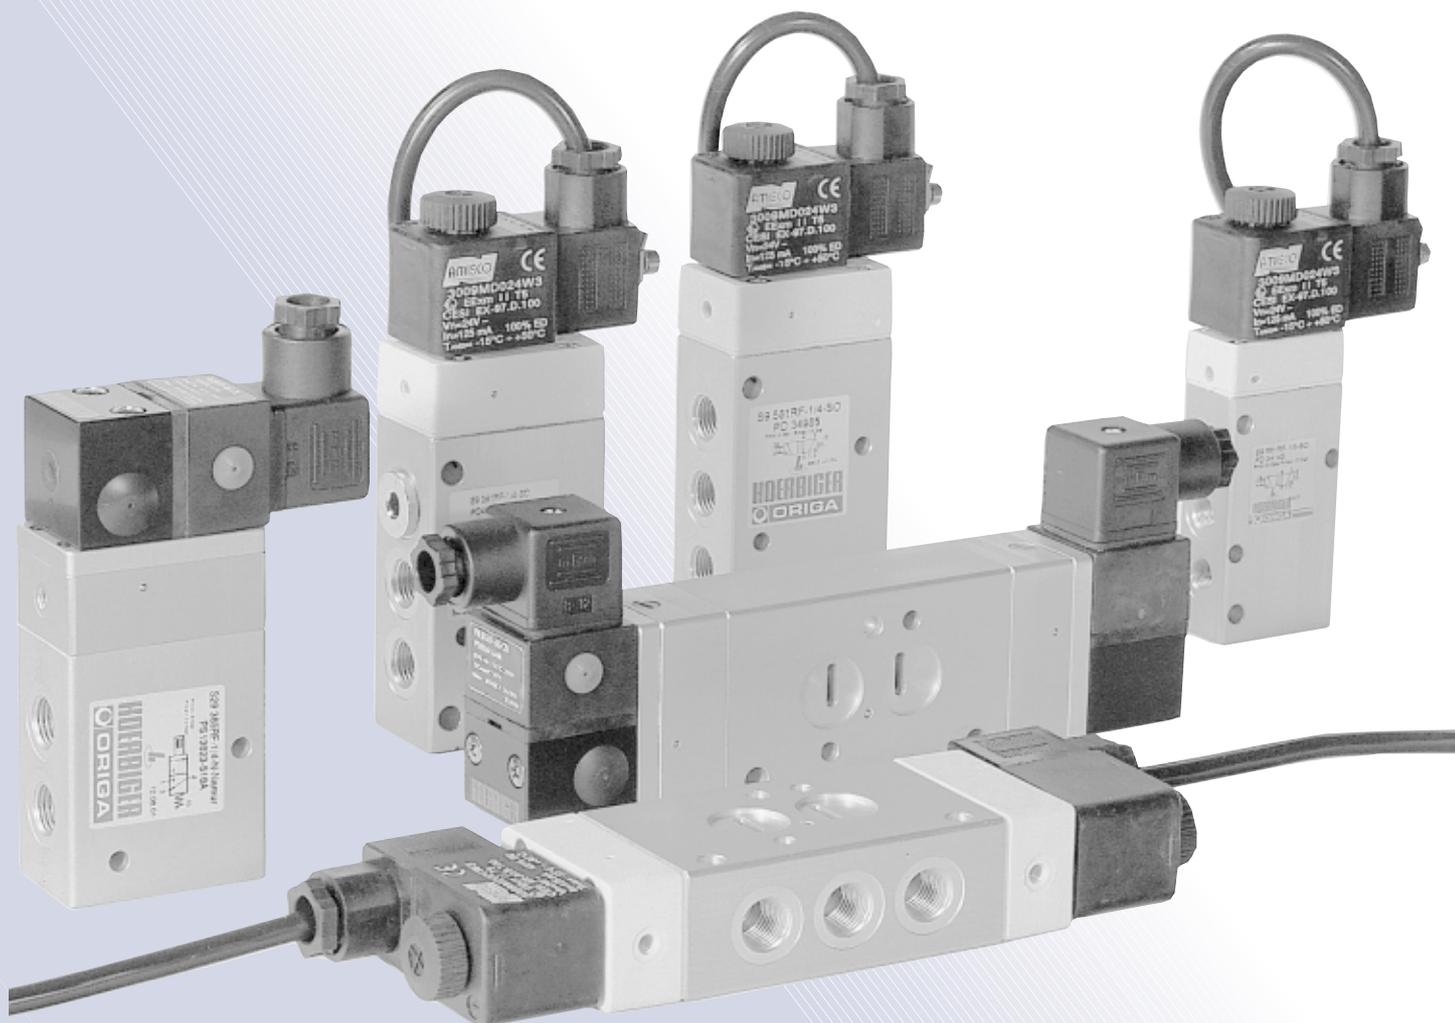

The operating voltage range of the valve may fluctuate due to temperature or long-term effects.

A control range of 0 to 24 V must therefore be designed into the controller.

Base Plate G1/8

3/2 Way Valves (Pilot Valves with Base Plate)

Series P8 – intrinsically safe, piezo electrical actuated

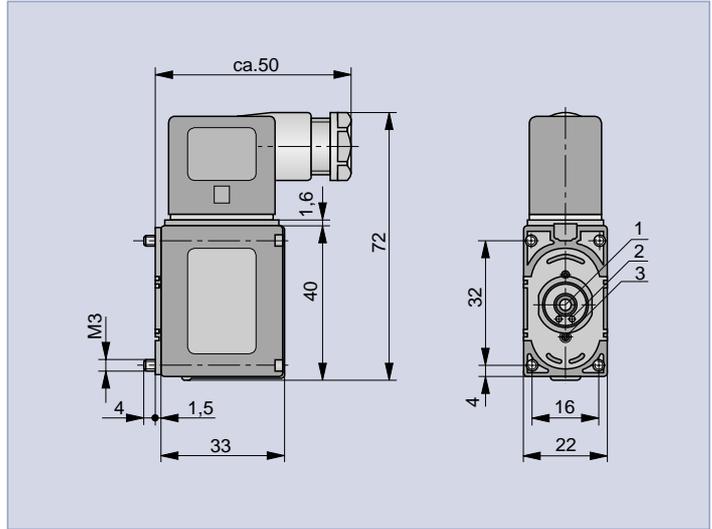

3/2 Way Poppet Valve Series P8 NW 1.6 and M5

Actuation:
– Piezo electric piloted

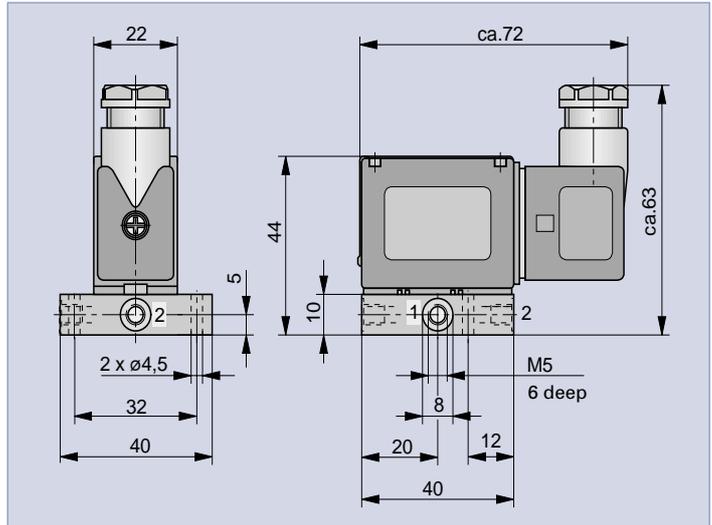

- Versions**
- Pilot valve NW1.6
 - Single valve M5
 - Manifold version M5
 - Normally closed
 - Normally open

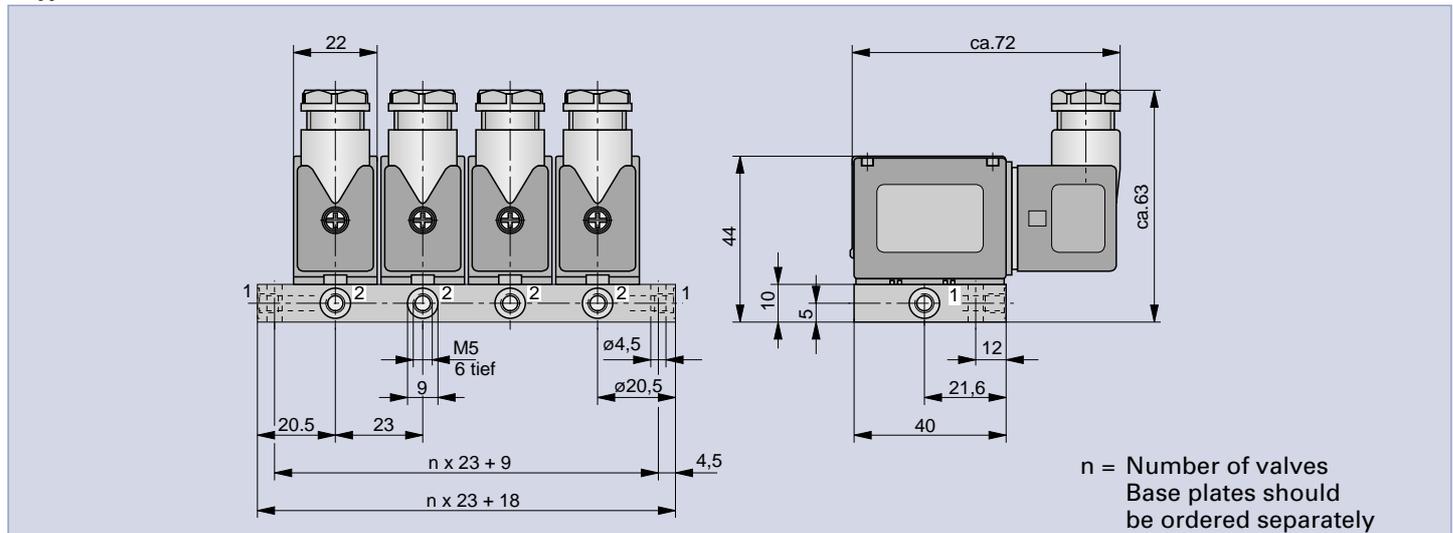

Pilot Valve
Type: P8 381RF-NG(NO)-.

Single Valve
Type: P8 381RF-M5 NG(NO)-.

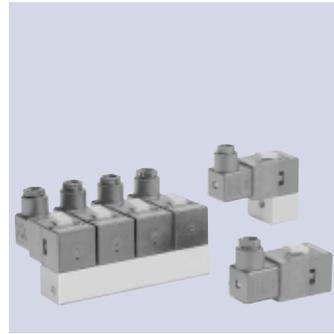

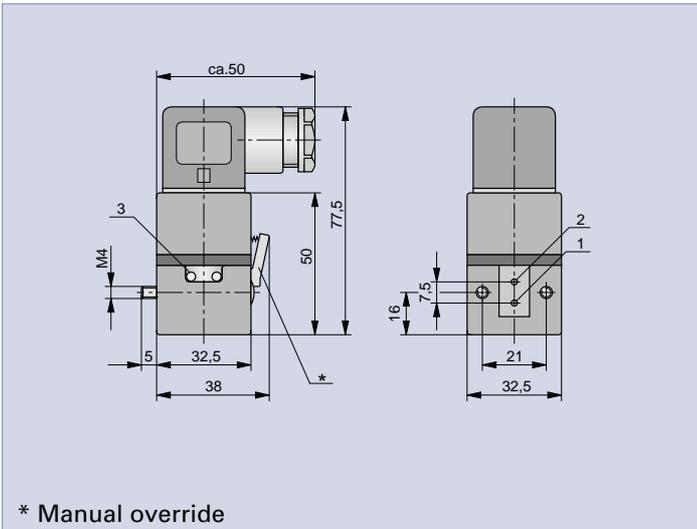

Manifold Version
Type: P8 381RF-M5 NG(NO)-S.

Order Instructions see page 22, Characteristics see page 27

Series P20 – intrinsically safe, piezo electrical actuated

Pilot Valve
Type: P20 381RF-NG(NO)-.

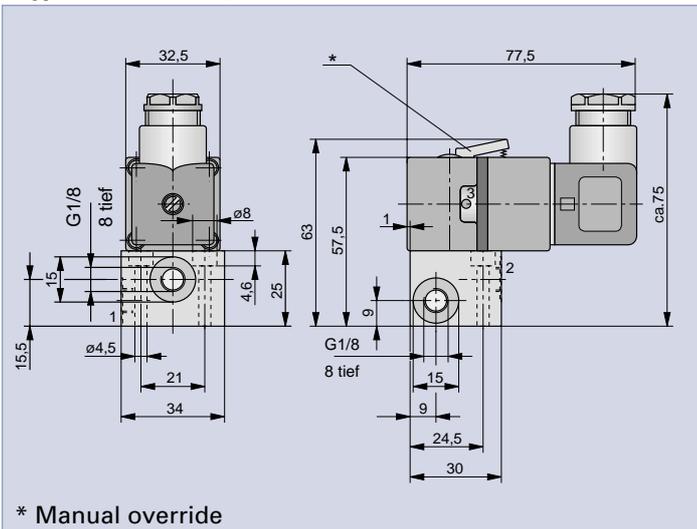

3/2 Way Poppet Valve Series P20 NW 2 and G1/8

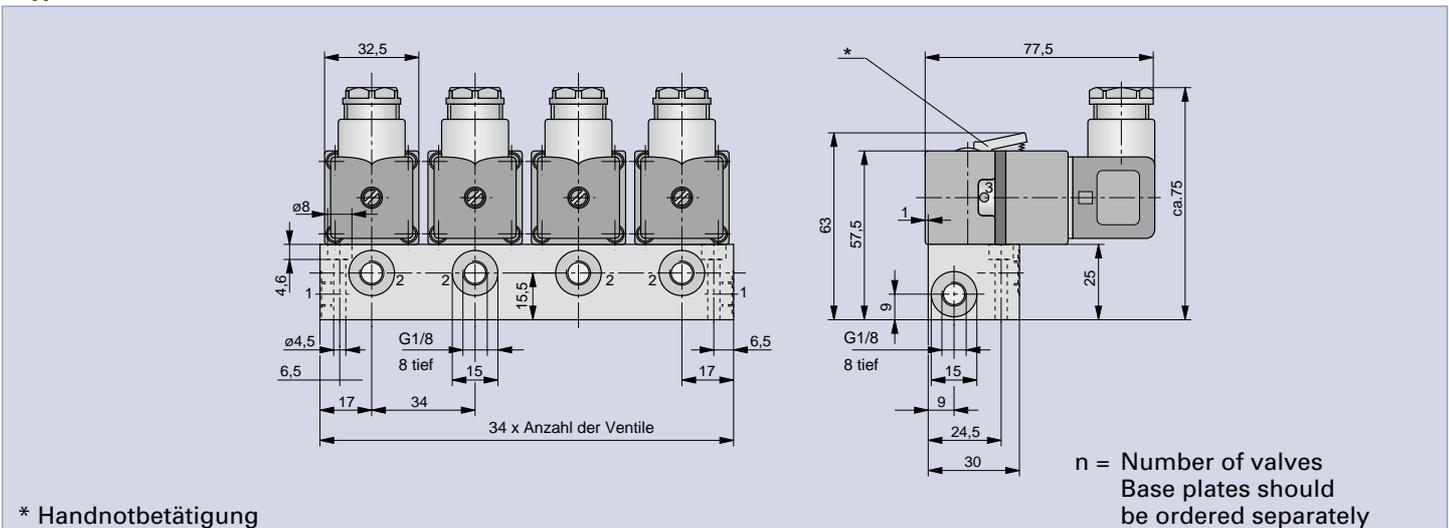

Actuation:
 – Piezo electric piloted

- Versions**
- Pilot valve NW2
 - Single valve G1/8
 - Manifold version G1/8
 - Normally closed
 - Normally open

Single Valve
Type: P20 381RF-1/8 NG(NO)-.

Manifold Version
Type: P20 381RF-1/8 NG(NO)-.

Order Instructions see page 22, Characteristics see page 27

3/2 Way Valve

Series S9 – intrinsically safe, piezo electrical actuated

3/2 Way Valve Series S9 G1/4

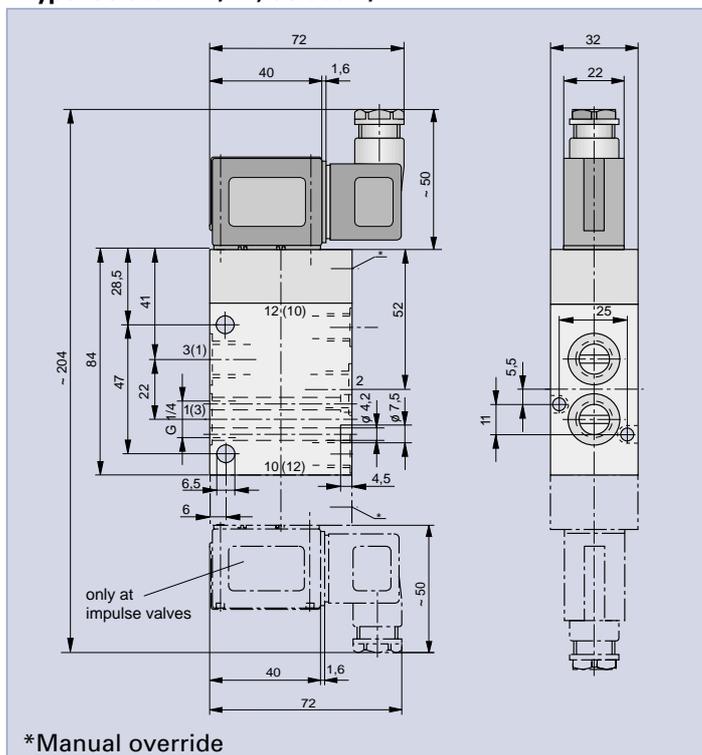

Actuation:
–Piezo electric piloted

Weight (mass) kg

Description	Type	Weight (mass)
Electrical, by perm. signal	S9 585RF-1/4-..	0.500
Electrical, by impulse	S9 585-1/4-..	0.600

3/2 Way Valve Type: S9 385RF-1/4-., S9 385-1/4-.

Order Instructions see page 23, Characteristics see page 28
P-Supply and RPS Manifolds see pages 43, 44, 47

5/2 and 5/3 Way Valve

Series S9 – intrinsically safe, piezo electrical actuated

5/2 and 5/3 Way Valve Series S9 G1/4

Actuation:
– Piezo electric piloted

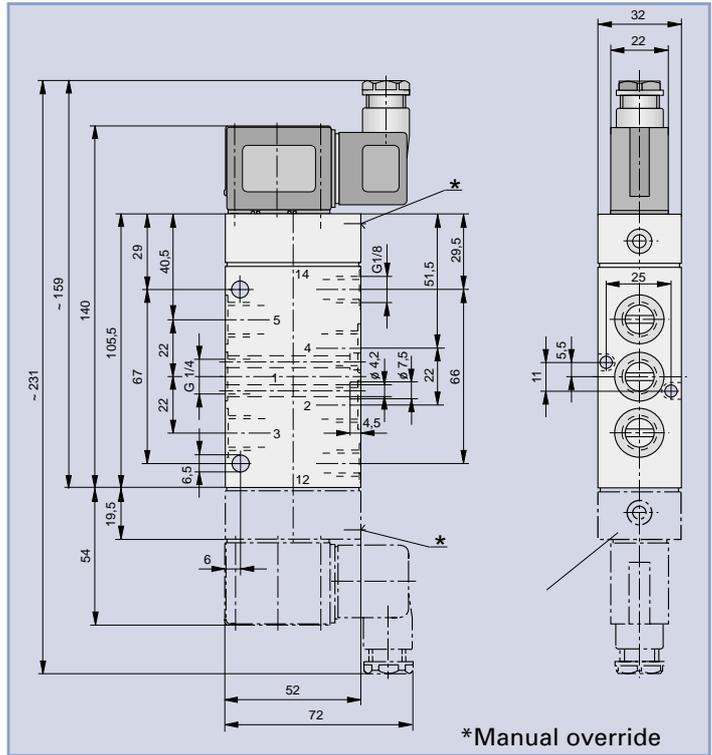

Weight (mass) kg

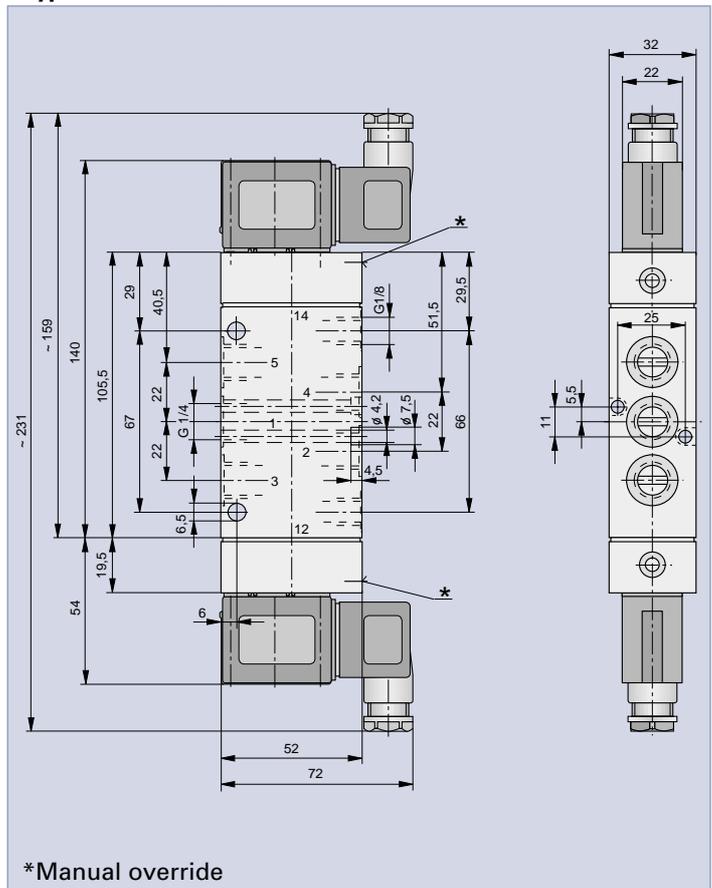

Description	Type	Weight (mass)
Electrical, by perm. signal	S9 585RF-1/4-..	0.550
Electrical, by impulse	S9 585-1/4-..	0.650
Electrical, by perm. signal *	S9 585RF.-1/4-..	0.620

* Middle position variants RFG, RFE, RFB

5/2 Way Valve Type: S9 585RF-1/4-., S9 585-1/4-.

5/3 Way Valve Type: S9 585RF.-1/4-.

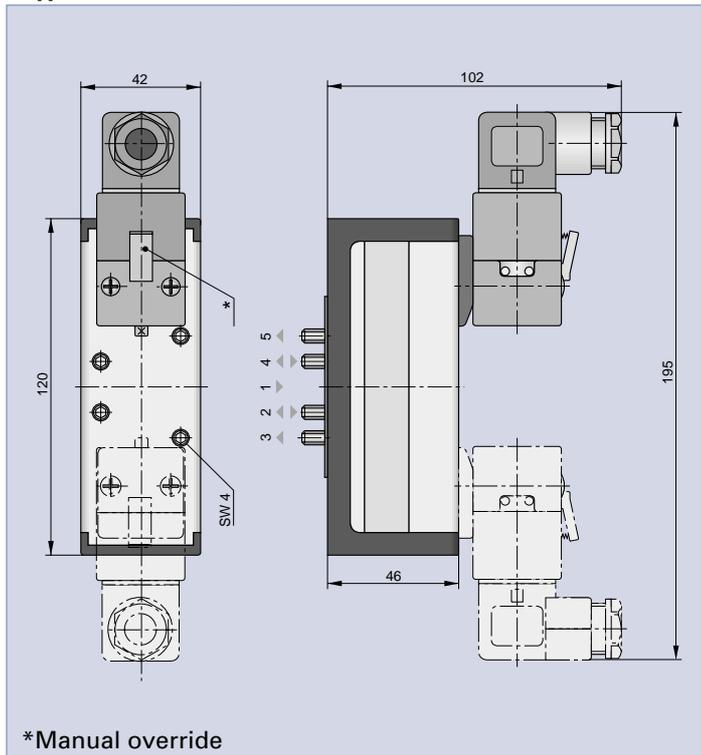

Order Instructions see page 23, Characteristics see page 28
P-Supply and RPS Manifolds see pages 43, 44, 47

Way Valve to ISO 5599

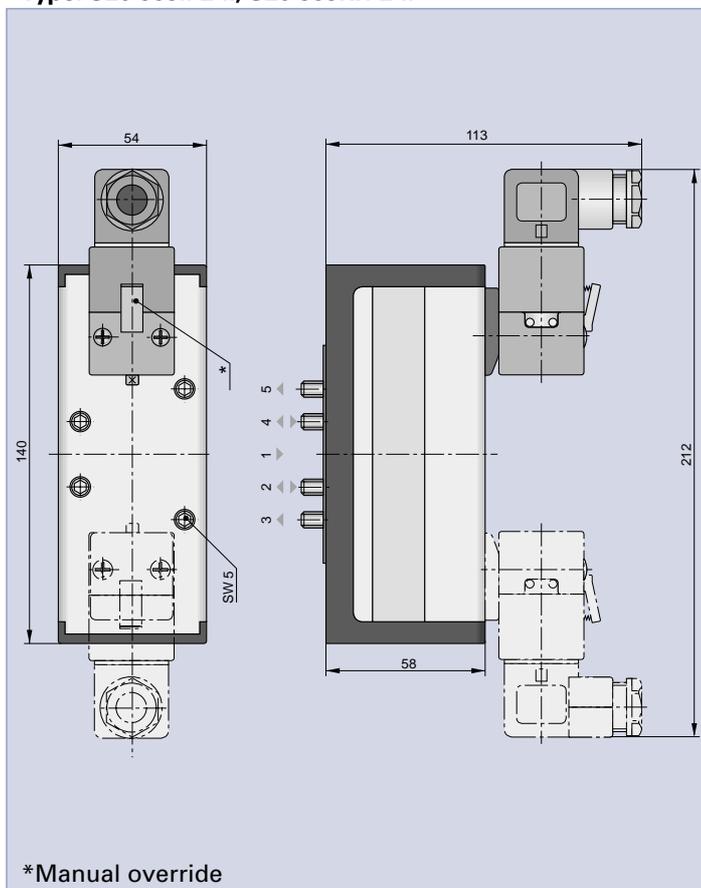

Series S20 – intrinsically safe, piezo electrical actuated

5/2 and 5/3 Way Valve to ISO 5599 Size 1
 Type: S20 585..-1-.., S20 585RF-1-..

*Manual override

5/2 and 5/3 Way Valve to ISO 5599 Size 2
 Type: S20 585..-2-.., S20 585RF-2-..

*Manual override

5/2 and 5/3 Way Valve Series S20 to ISO 5599 Sizes 1, 2, 3

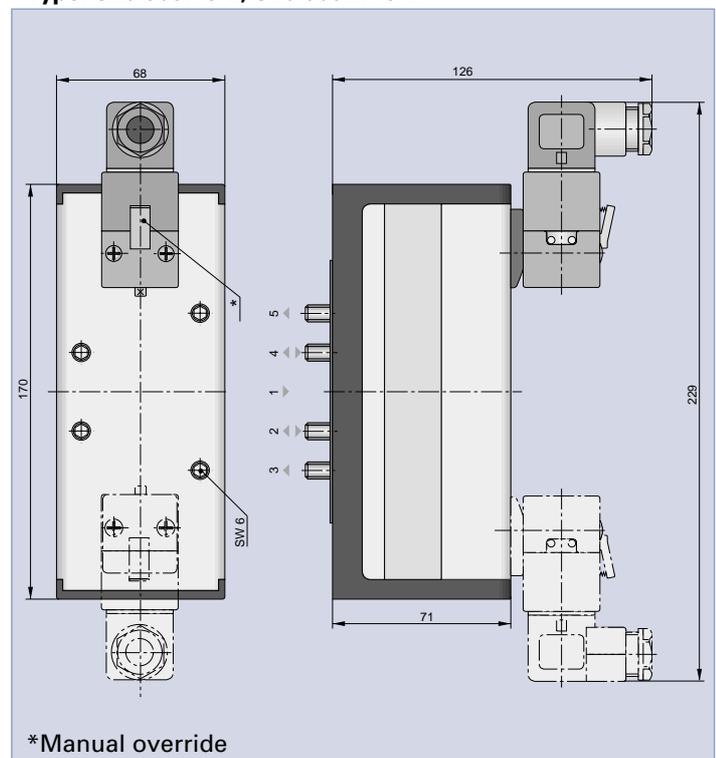

Actuation:
 – Piezo electric piloted

Weight (mass) kg

Description	Type	Weight (mass)
Electrical, by perm. signal	S20 585RF(R)-1-..	0.460
Electrical, by impulse	S20 585-1-..	0.590
Electrical, by perm. signal *	S20 585RF-1-..	0.590
Electrical, by perm. signal	S20 585RF(R)-2-..	0.700
Electrical, by impulse	S20 585-2-..	0.830
Electrical, by perm. signal *	S20 585RF-2-..	0.830
Electrical, by perm. signal	S20 585RF(R)-3-..	1.230
Electrical, by impulse	S20 585-3-..	1.370
Electrical, by perm. signal *	S20 585RF-3-..	1.370

* Middle position variants RFG, RFE, RFB

5/2 and 5/3 Way Valve to ISO 5599 Size 3
 Type: S20 585..-3-.., S20 585RF-3-..

*Manual override

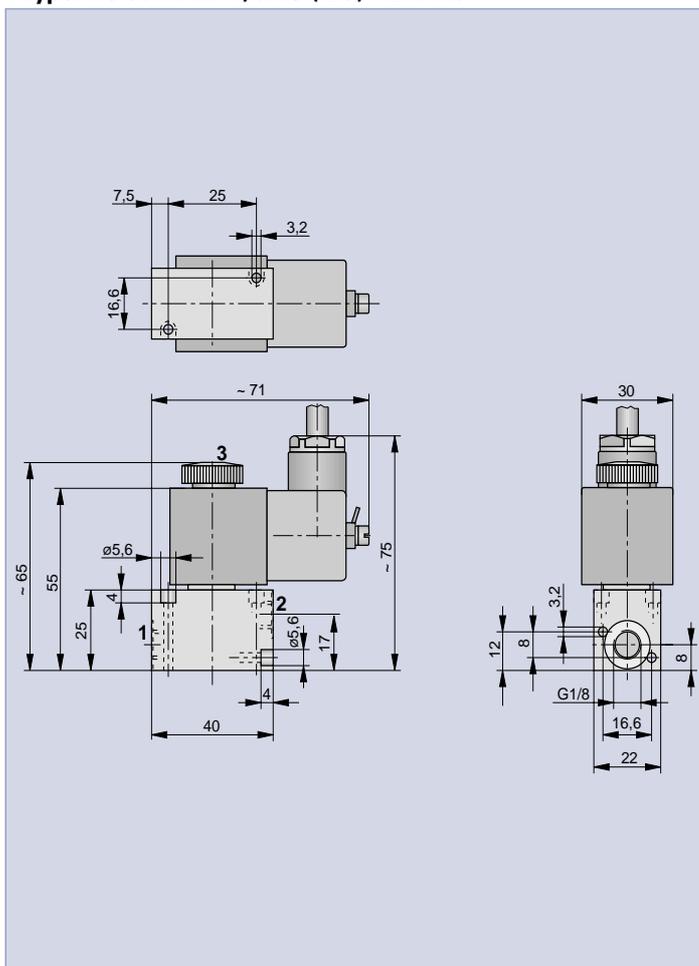

Order Instructions see page 23, Characteristics see page 29
 Base Plates see pages 48-51

3/2 Way Valve Series V9 NW 1.3

EEx m Solenoids
–Electrical, direct piloted

Type: V9 381RF-1/8NG (NO)– NW 1.3
Type: V9 381H-RF-1/8NG (NO)– NW 1.3

Accessories for P-Supply Manifolds

Description	for NW	Order No.
O-ring 10x2	1.3	88-37H643-75
Screw M3x40	1.3	ZP3986
P-supply manifolds PL-1/8-..	1.3	PD32763-....*
P-supply manifolds PLK-1/8-..	1.3	PD37174-....*

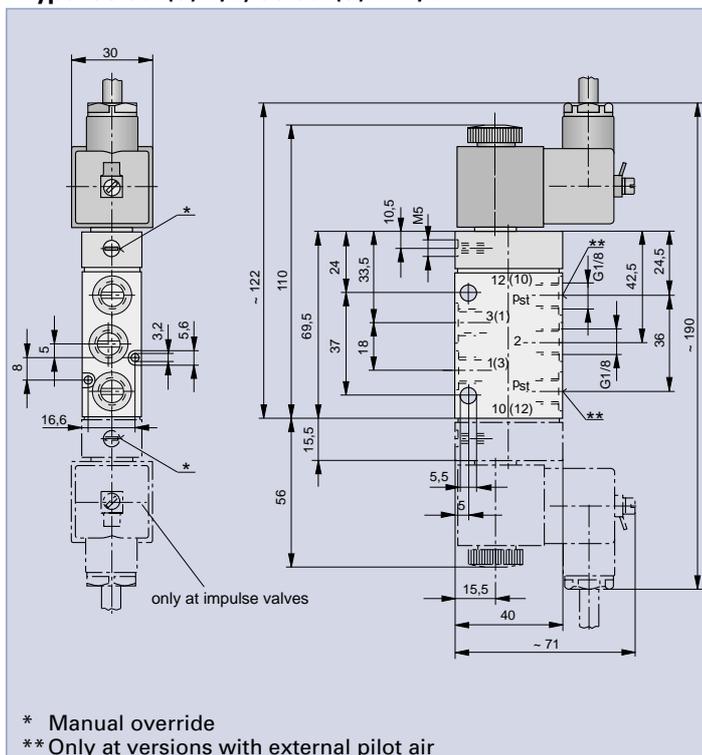

* Add number of valve positions to order no.

3/2 Way Valve

Series S9 – with EEx m-Solenoids

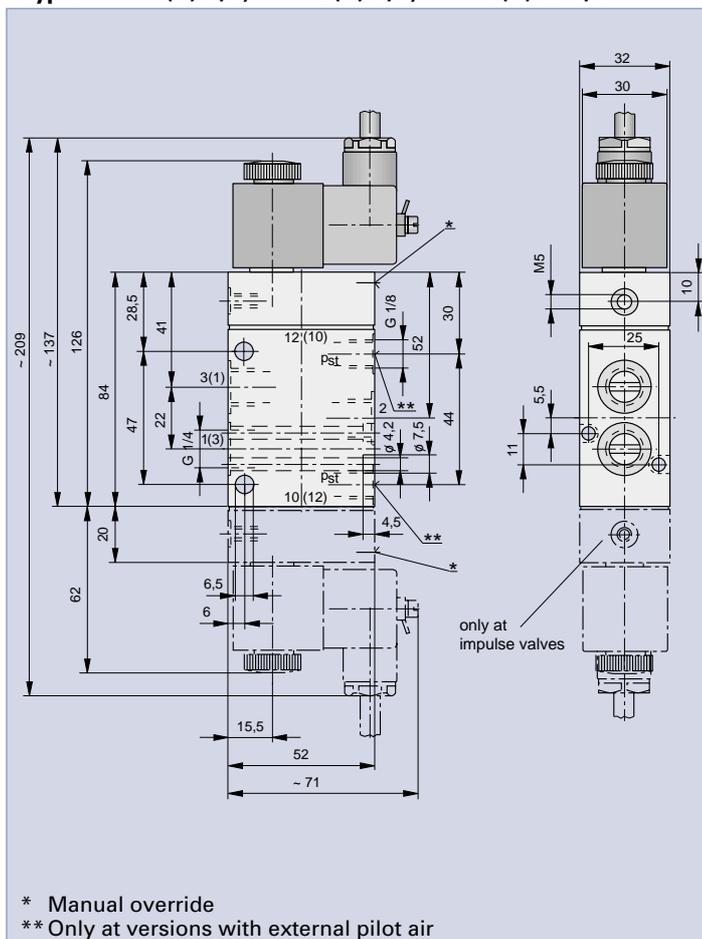

Electrical pilot operation

Type: S9 381(S)-1/8, S9 381(S)RF-1/8

Electrical pilot operation

Type: S9 381(S)-1/4, S9 382(S)-1/4, S9 381(S)RF-1/4

3/2 Way Valve Series S9 G1/8, G1/4, G1/2

Actuation:
EEx m Solenoids
– Electrical pilot operation
– Electrical pilot operation with external pilot air

Note:
If mounted to a P-supply manifold, the option of specifying valve S9 381S-RF-1/8 as “normally open” is not available

Versions

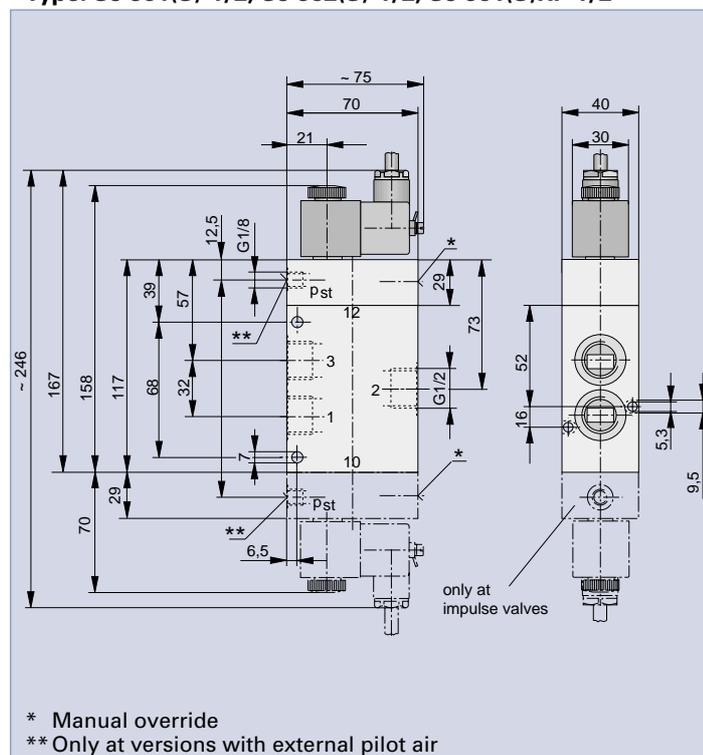

- Normally closed
- Normally open
- With external pilot air

Weight (mass) kg

Description	Type	Weight (mass)
Electrical, by permanent signal	S9 381(S)RF-1/8	0.247
Electrical, by impulse	S9 381(S)-1/8	0.382
Electrical, by permanent signal	S9 381(S)RF-1/4	0.500
Electrical, by impulse	S9 381(S)-1/4	0.600
– with differential piston	S9 382(S)-1/4	0.600
Electrical, by permanent signal	S9 381(S)RF-1/2	0.815
Electrical, by impulse	S9 381(S)-1/2	1.100
– with differential piston	S9 382(S)-1/2	1.100

Electrical pilot operation

Type: S9 381(S)-1/2, S9 382(S)-1/2, S9 381(S)RF-1/2

Order Instructions see page 24, Characteristics see page 28
P-Supply and RPS Manifolds see pages 41-47

5/2 Way Valve Series S9 G1/8, G1/4, G1/2

Actuation:
EEx m Solenoids
– Electrical pilot operation
– Electrical pilot operation
with external pilot air

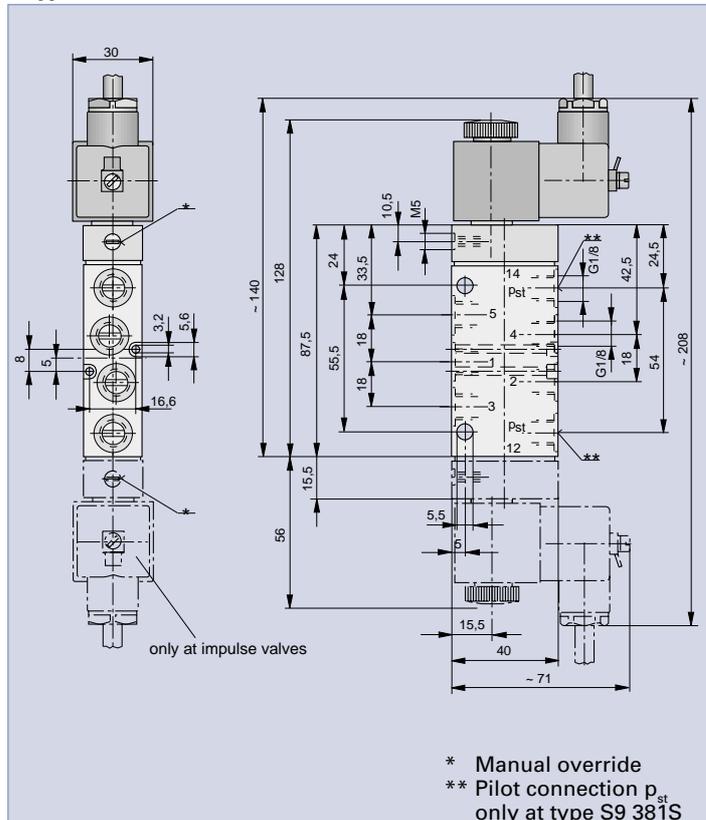

Versions
– With external pilot air

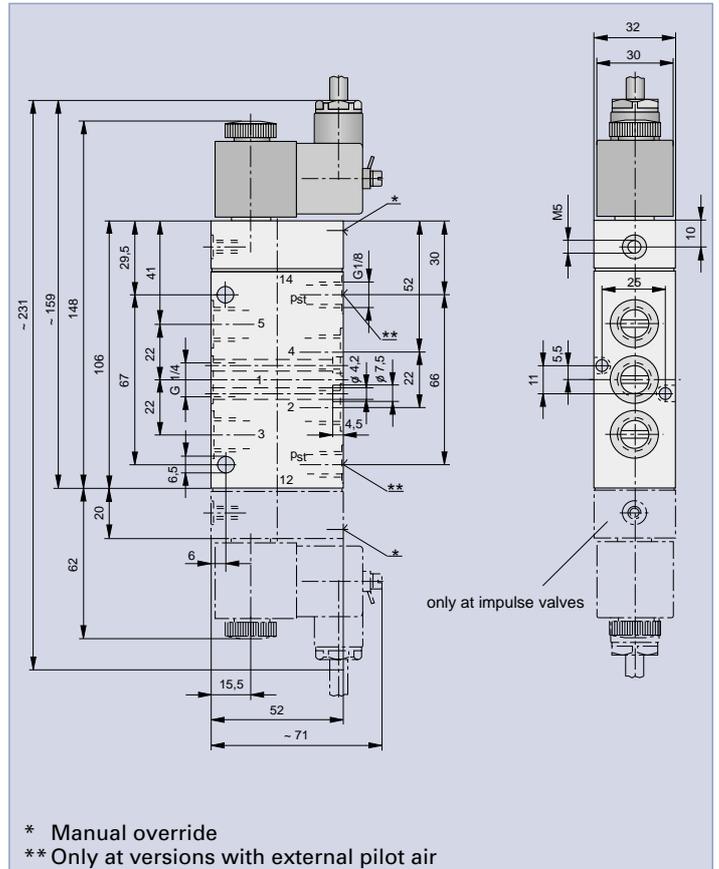

Weight (mass) kg

Description	Type	Weight (mass)
Electrical, by permanent signal	S9 581(S)RF-1/8	0.280
Electrical, by impulse	S9 581(S)-1/8	0.415
Electrical, by permanent signal	S9 581(S)RF-1/4	0.600
Electrical, by impulse	S9 581(S)-1/4	0.700
– with differential piston	S9 582(S)-1/4	0.700
Electrical, by permanent signal	S9 581(S)RF-1/2	1.000
Electrical, by impulse	S9 581(S)-1/2	1.270
– with differential piston	S9 582(S)-1/2	1.270

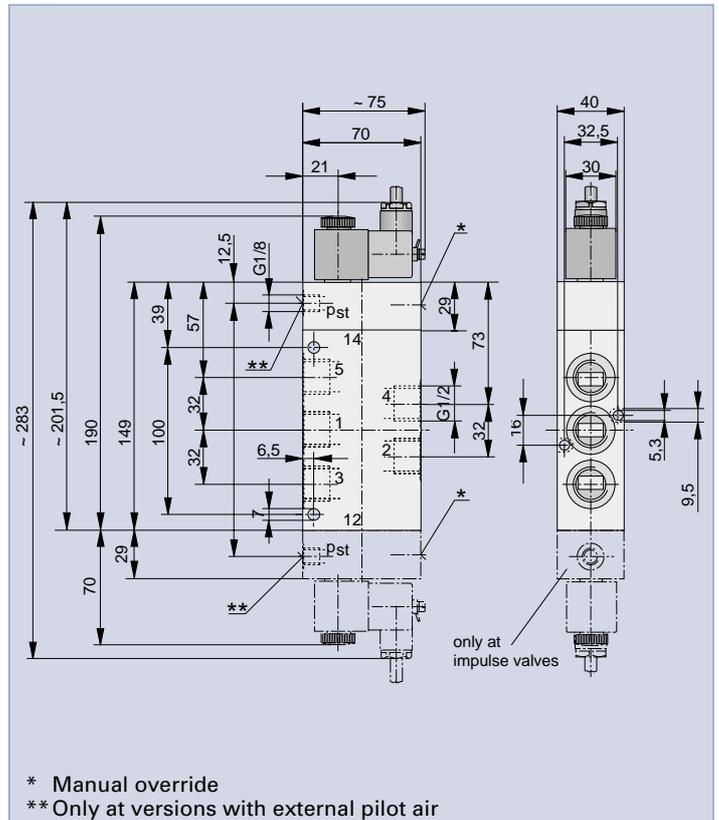

Electrical pilot operation Type: S9 581(S)-1/8, S9 581(S)RF-1/8

Electrical pilot operation Type: S9 581(S)-1/4, S9 582(S)-1/4, S9 581(S)RF-1/4

Electrical pilot operation Type: S9 581(S)-1/2, S9 582(S)-1/2, S9 581(S)RF-1/2

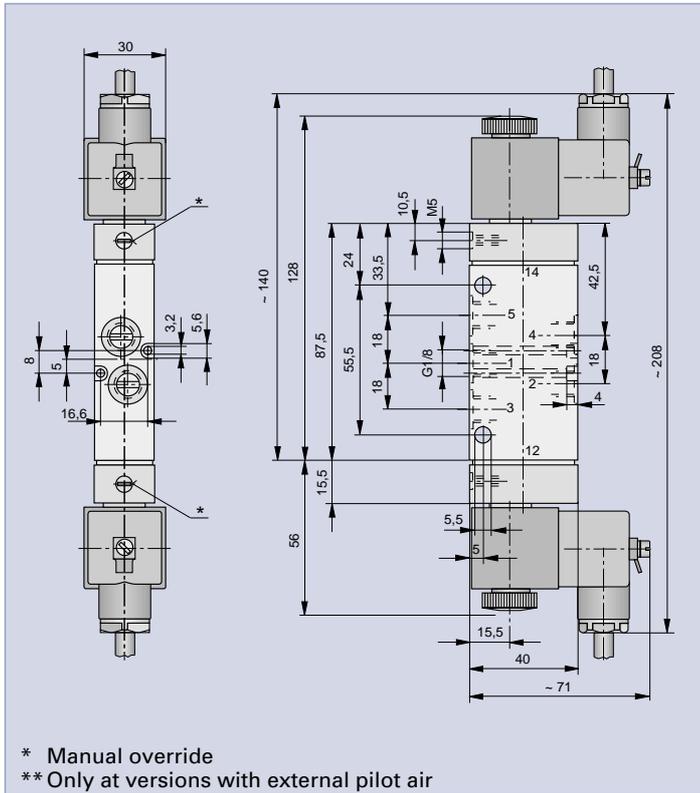

Order Instructions see page 24, Characteristics see page 28
P-Supply and RPS Manifolds see pages 41-47

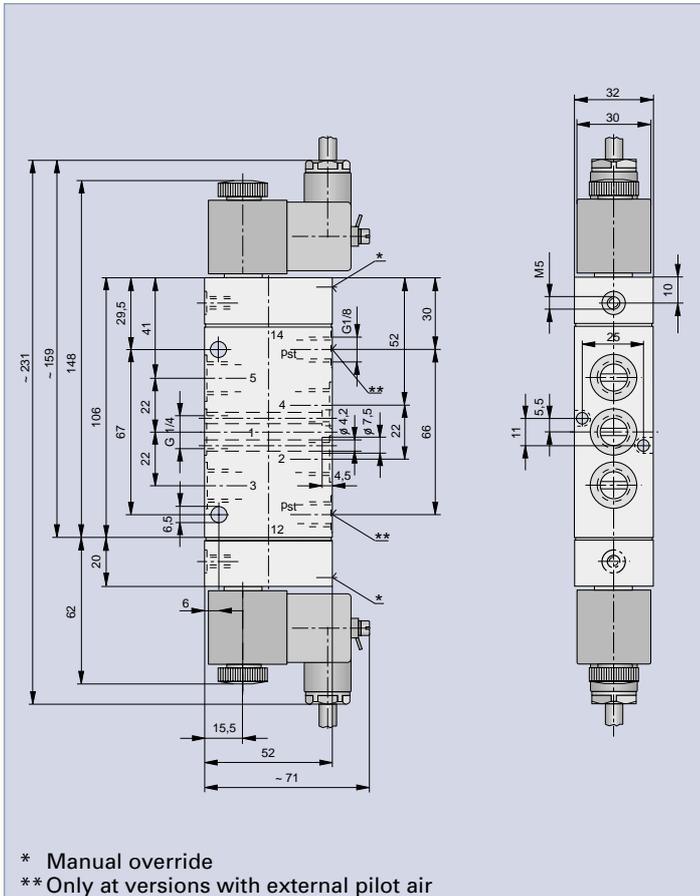

5/3 Way Valve

Series S9 – with EEx m-Solenoids

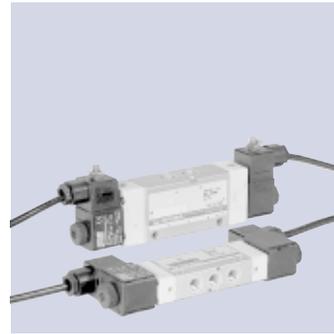

Electrical pilot operation
Type: S9 581RF-1/8

Electrical pilot operation
Type: S9 581RF-1/4

Order Instructions see page 24, Characteristics see page 28
P-Supply and RPS Manifolds see pages 41-47

5/3 Way Valve Series S9 G1/8, G1/4, G1/2

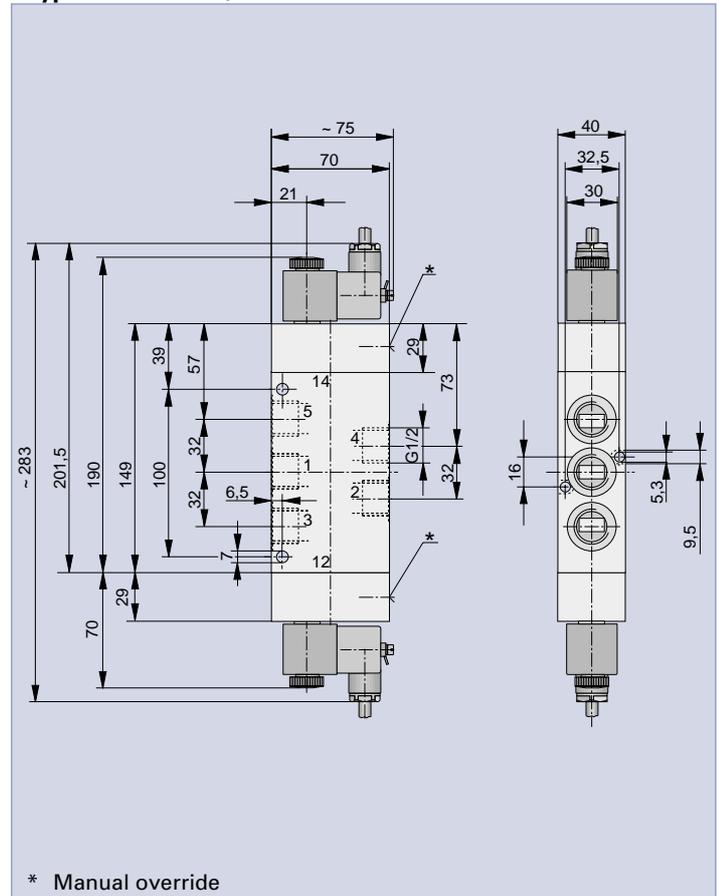

Actuation:
EEx m Solenoids
– Electrical pilot operation
– Electrical pilot operation
with external pilot air

Weight (mass) kg

Description	Type	Weight (mass)
Electrical, by permanent signal *	S9 581RF-1/8	0.247
Electrical, by permanent signal *	S9 581RF-1/4	0.500
Electrical, by permanent signal *	S9 581RF-1/2	0.770

* Middle position variants RFG, RFE, RFB

Electrical pilot operation
Type: S9 581RF-1/2

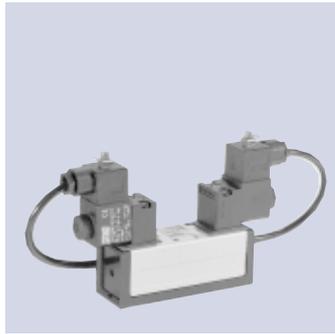

5/2 and 5/3 Way Valve to ISO 5599

Series S20 – with EEx m-Solenoids

5/2 and 5/3 Way Valve Series S20 to ISO 5599 Sizes 1, 2, 3

Actuation:
EEx m Solenoids
–Electrical pilot operation

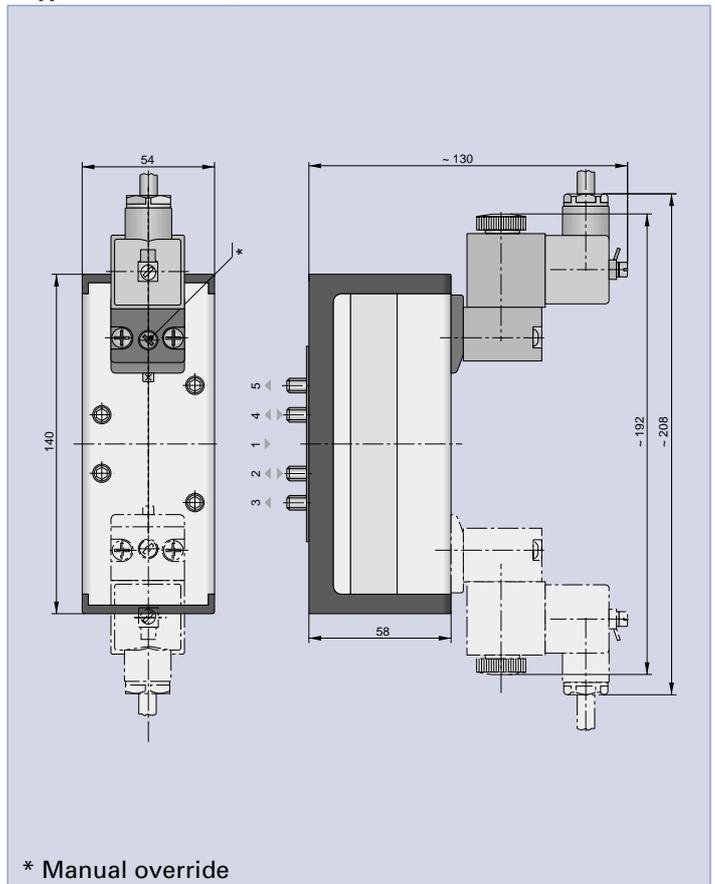

Weight (mass) kg

Order Instructions see page 26, Characteristics see page 29
Base Plates see pages 48-51

P-Supply Manifolds for Directional Valves, Series S9-1/8

Series PL-1/8-..

Material

Description	Material
P-supply manifold	Al, anodized
Mounting bracket	Steel, passivated
Screws	Galvanized steel
O-ring	Oil-resistant rubber

Accessories

Description	Order No.
Complete cover plate	PD 34694
Flow divider	PD 42483

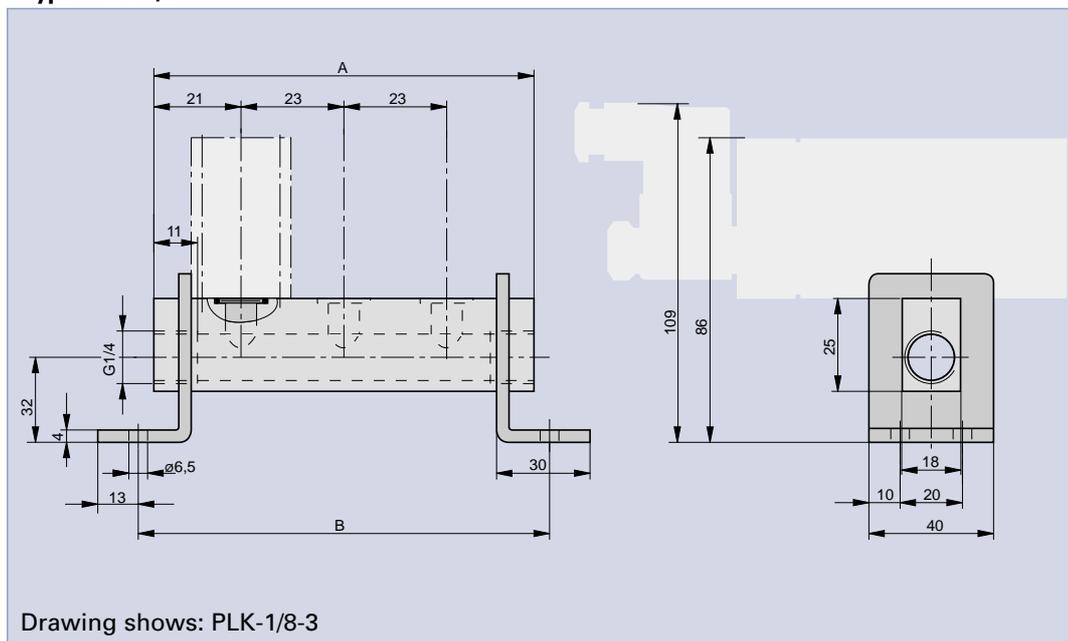

P-Supply Manifolds for Way Valve Series S9-1/8

Versions

- Type PLK-1/8 (short mounting bracket)
- Type PL-1/8 (long mounting bracket)

P-Supply Manifold Type: PLK-1/8-..

P-supply manifolds reduce and simplify tubing. They allow a compact and clear design. 3/2, 5/2 and 5/3 directional valves with different types of actuation can be mounted in groups of 2-10 pieces.

The use of impulse solenoid valves is only possible with P-supply manifold type PLK-..

The delivery includes

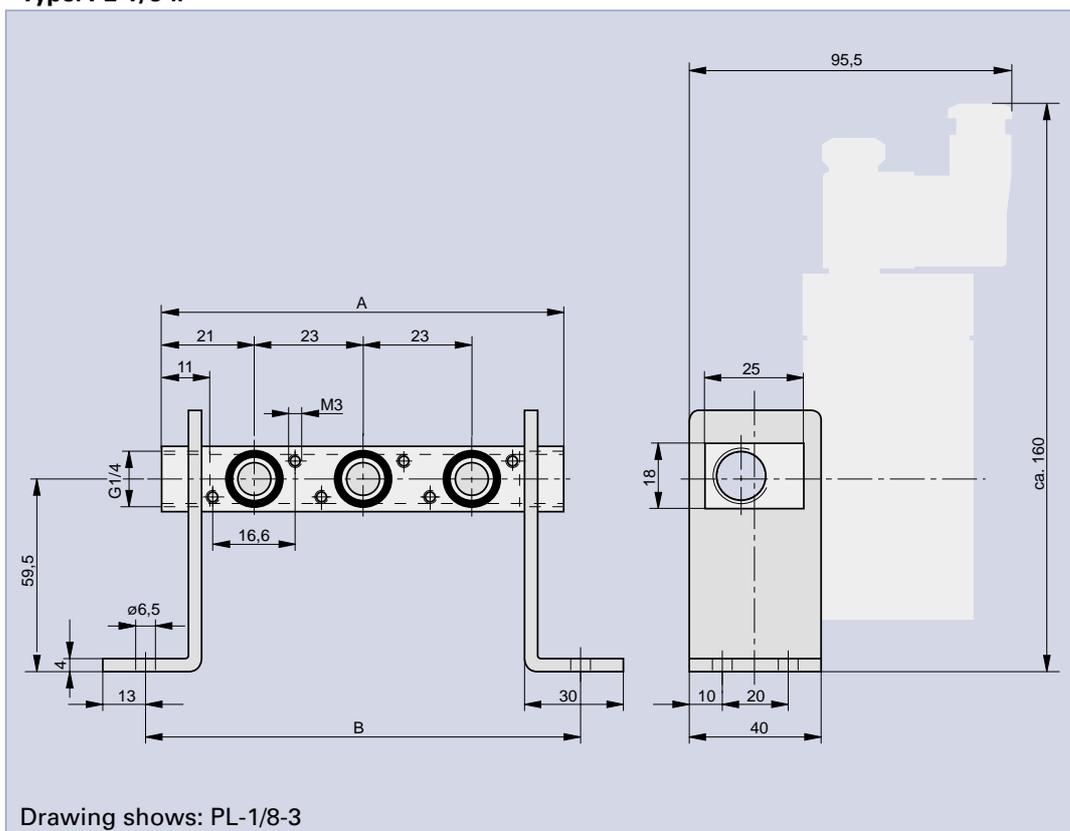

- P-supply manifold
- Mounting bracket
- Mounting screws
- O-rings

Dimensions, Order Instructions and Weight (mass)

RPS-Supply Manifold Type: RPSL-S9-1/8-..

RPS-supply manifolds reduce and simplify tubing. They allow a compact and clear design.

The RPS manifolds have a common compressed air supply (P) and common vent lines (R, S).

Valves can be mounted in groups of 2-10 pieces.

The delivery includes
RPS-supply manifold
Mounting screws
O-rings

AIRFIT CONTROL

Electronically controlled Pressure Regulating Valves

HOERBIGER
ORIGA

AIRFIT TECNO: SPEED, ACCURACY AND DYNAMICS IN A MINIATURE FORMAT

The *airfit tecno* proportional pressure regulator combines Piezo technology, precision engineering and electronics in a highly compact arrangement, resulting in outstanding regulation speed and accuracy. To illustrate the unit's fast response, less than 7 milliseconds are required from the command to change pressure until the changing pressure is registered at the outlet. The dynamic characteristics are outstanding: with small air volumes the *airfit tecno* achieves a limiting frequency of 43 Hz, i.e. 43 pressure changes per second.

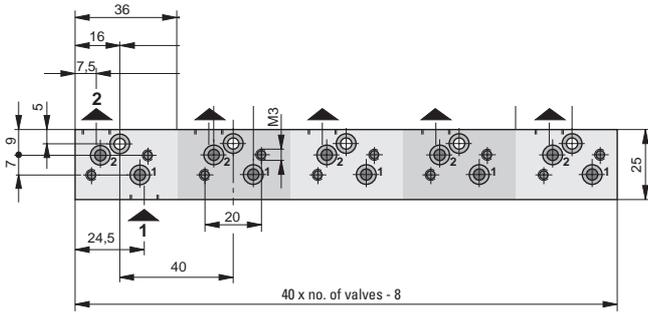

Reduced to the Maximum

Despite its maximised performance capabilities, the minimised dimensions and weight of the *airfit tecno* are remarkable. The exclusive use of proportional components - instead of switching valves - contributes to an unusually long service life. For users who want to install the *airfit tecno* in their own control circuits the unit is also available in an OEM version, i.e. without the electronic regulation system.

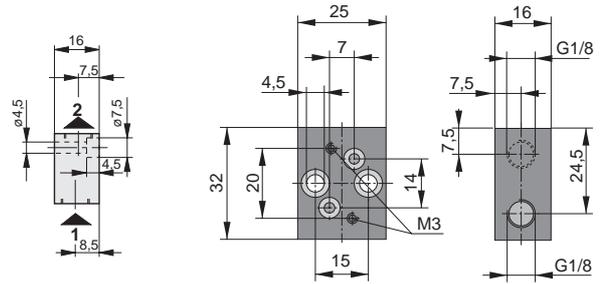

airfit tecno

with actual value output or EMC ground**

Socket with 90° mounting

**Design and Function
Type airfit tecno**

airfit tecno uses the proven HOERBIGER-ORIGA Piezo valve as its pilot unit. In its proportional version this Piezo valve provides the regulator's 'main stage' with a fast and highly dynamic pilot signal. Air supply to the Piezo valve is via an integrated miniature pressure regulator and fine filter. For the main stage a proportional diaphragm pressure regulator is used, with two separate seats for pressurising and venting. The outlet pressure is compared with the set pressure via a pressure sensor and is constantly corrected by the electronic control system.

airfit tecno:
Proportional
Pressure Regulator
with Piezo Control

The Benefits

- Accurate regulation
- High dynamics
- Long service life
- Low power consumption
- Also available in an OEM version (without electronic regulation system) s. p. 14
- Manifold mounting options

Applications

- Pneumatic brakes
- Tension control in winding machines
- Ultrasonic welding
- Vacuum generation
- Metering technology
- Artificial respiration equipment (OEM version)

Technical Highlights

- Port size G1/8
- Responsiveness < 0.1 %
- Reaction time < 7 ms
- Limiting frequency 43 Hz
- Weight 0.18 kg
- Maximum flow rate 350 l/min
- Pressure ranges 0-8 bar
- 0-2 bar
- 0-200 mbar

airfit tecno without regulation system on request: e-mail: interface@hoerbiger-origa.com

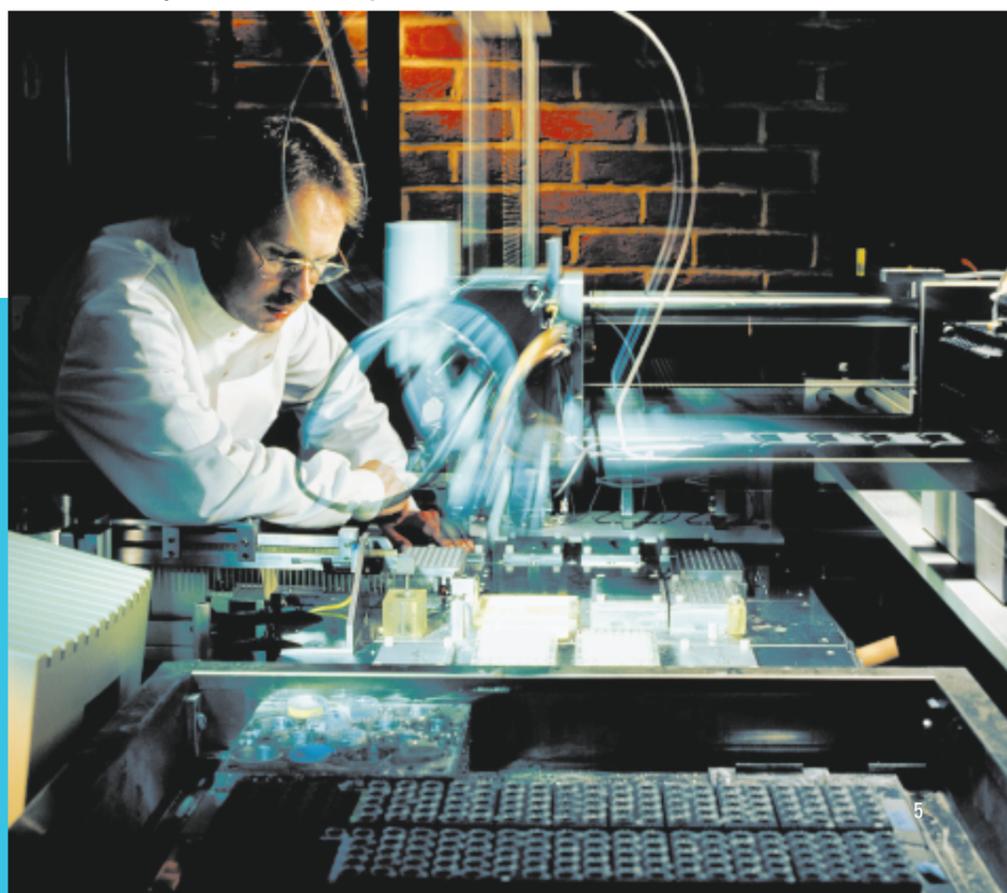

AIRFIT SRE AND CRE:
SUPERIOR MANAGEMENT OF LARGE, RAPID PRESSURE CHANGES

The *airfit SRE* and *CRE* electronically controlled pressure regulators were specially developed for applications where pressure must be accurately regulated despite large, rapid pressure changes. The interface function between electronics and pneumatics is provided by two poppet valves, which pressurise and vent the pilot chamber. This results in extremely low air consumption during the regulation process.

Perfect performance even at low pressures

For some applications, for example in testing and measurement technology, the *airfit SRE* and *CRE* have the decisive advantage of outstanding performance even at the lowest pressures. Under certain conditions the regulation range can even start at 0 bar. There is no stick-slip effect. Self-regulating seals provide an absolutely smooth regulation function and this leads to a significantly lengthened service life.

airfit tecno in the pharmaceutical industry

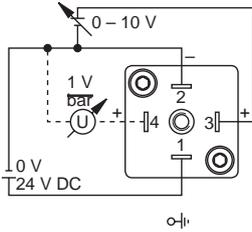

airfit SRE airfit CRE

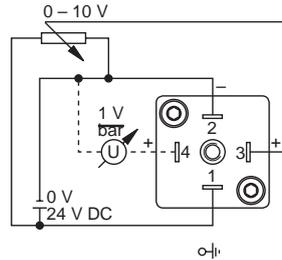

Control Possibilities

Analogue Voltage

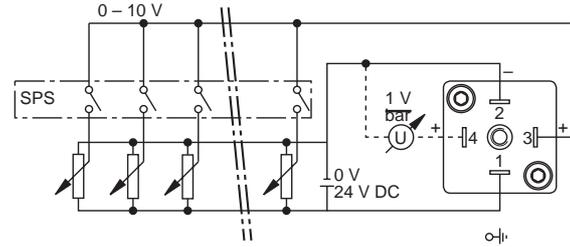

With Single Potentiometer

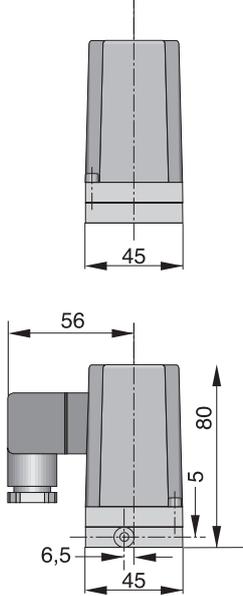

Resistance of potentiometer should be between 500 Ω and 100 kΩ

PLC Combined with Several Potentiometers

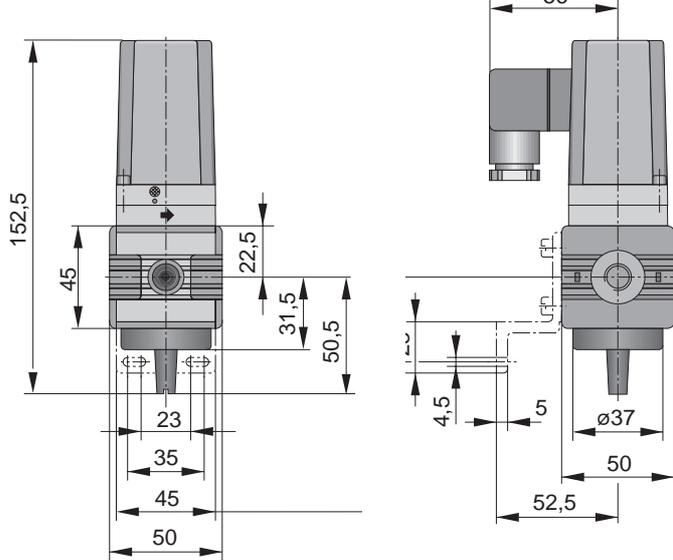

Total resistance of potentiometer series should be not less than 500 Ω

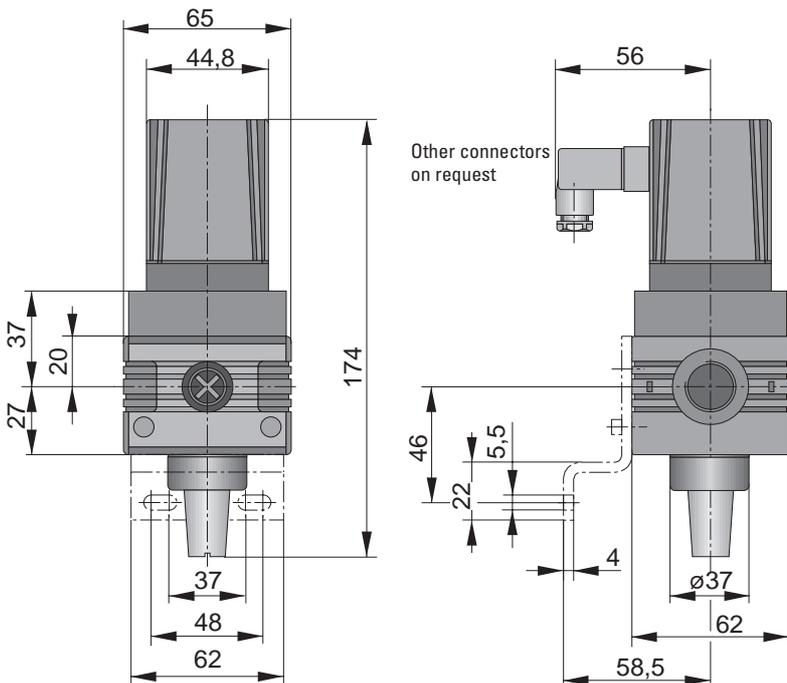

Dimensions (mm) Type: MRE-M5

Dimensions (mm) Type: SRE-1/4

Dimensions (mm) Type: CRE-1/2

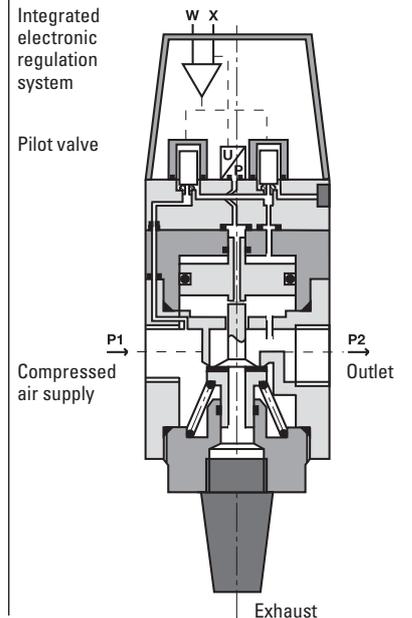

**Design and Function
Type SRE and CRE**

Two poppet valves convert electrical impulses into the pilot pressure. This positive pressurisation of the pilot chamber eliminates permanent air consumption. Air consumption during the regulation process is extremely low.

The main stage is a piston-type pressure regulator.

The self-regulating seal between the pilot chamber and the outlet p2 prevents the so-called stick-slip effect and thus lengthens the service life of the regulator.

The *airfit* SRE and CRE can be controlled by a PLC or a potentiometer, optionally with 0–10 V, 0–20 mA or 4–20 mA. A fast exhaust system is built into the *airfit* SRE and CRE.

airfit SRE and CRE in the automotive industry

AIRFIT SRT AND CRT: THE COMBINATION OF POWER AND SPEED

The *airfit SRT* and *CRT* electronically controlled pressure regulators are especially recommended for applications that demand extremely fast pressure changes at high flow rates. The combination of *airfit tecno* as the pilot valve and *airfit SRE* or *CRE* as the pneumatic amplifier provides a unique solution for such a requirements profile.

airfit SRT *airfit CRT*

PARAMETERS TO VDI 3292

AIRFIT CONTROL: INTELLIGENT PRESSURE REGULATION FOR SPECIFIC APPLICATIONS

airfit control:
in use

Proportional pressure regulators from the *airfit control* programme are used for a wide variety of applications, a selection of which are shown here. For further information on these or your particular application, don't hesitate to contact us.

Tension Regulation in Winding Machines

To ensure consistent high quality in winding processes, the correct speed and tension are critical. *airfit tecno* and *airfit SRE* are used here for the control of pneumatic brakes and dancer rollers.

Ultrasonic Welding

In ultrasonic welding machines it is important to apply the welding head with exactly defined force to ensure consistent quality. *airfit tecno* and *airfit SRE* control the pneumatic cylinder which applies this force.

Welding

Proportional regulators are used here to control the gripping force of the welding gun accurately, rapidly and according to the nature and thickness of the material.

Metering of Liquids

In the metering or mixing of sealants, adhesives or chemical compounds, proportional valves are used which are pneumatically pilot-controlled by *airfit tecno*. In this way the mixture ratio or metering can be set by the control system.

Vacuum Generation

Vacuum generation ejectors use an input pressure to generate a vacuum. The vacuum may be regulated by varying the input pressure. *airfit tecno* and *airfit SRE* provide optimum pressure regulation and thus improve the performance of the ejector.

Paint Spraying Equipment

airfit tecno and *airfit SRE* are used to regulate the speed of the turbine which is required to atomise the paint. They also control the air pressure at the sprayhead, which directs the paint spray. The fast pressure regulation at high flow rates greatly improves the quality and speed of the paint spraying operation.

Mills, Grinding and Polishing Machines

Accurate application pressure is essential here to achieve safe processing and high product quality. However, the pressure must be varied to suit the material, the type of operation and the particular tool. *airfit tecno* or *airfit SRE* satisfy these requirements completely.

Positioning

With pneumatic positioning axes two *airfit tecno* or *airfit SRE* units are used to precisely control the cylinder position by pressurising or venting the cylinder. The command signals for the pressure regulators come from analogue or digital linear measurement systems.

Auxiliary Air in Plastics Processing

The pre-moulds for plastic bottles and containers have to be heated before the final blow-moulding operation. *airfit tecno* is used to maintain a low positive pressure to ensure that the heated pre-mould keeps its optimum shape before further processing.

Artificial Respiration Equipment

Artificial respiration equipment demands accurate regulation of pressures and flow rates in a low range of pressures. The application is often ideally satisfied by the *airfit tecno OEM*, which can be completely integrated into the purpose-designed regulation systems. In mobile equipment its light weight and low power consumption are especially important.

Conveyor Belt Positioning

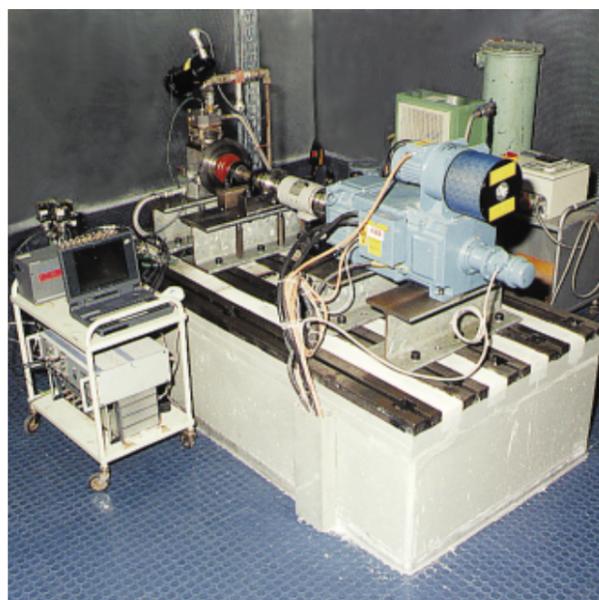

Precise positioning of conveyor belts and winding rollers is especially important over long distances. The regulation system receives signals from a belt edge position sensor. The *airfit tecno* or *airfit SRE* generates the pressure to drive the pneumatic cylinder connected to the guide roller.

Rolling

airfit control enables the pressure of the rollers to be varied, to achieve consistent quality in spite of different material thicknesses and other variable process influences.

WORTH KNOWING: THE FINE DISTINCTION BETWEEN CONTROL AND REGULATION

Basically there are two possible ways of maintaining the pressure in a pneumatic system at a certain level or generating a defined pressure profile - either a control system or a regulation system. The fine distinction can be seen in the accuracy and in the costs of the equipment.

Control for test equipment

The Control System – Open Circuit Control

In an open circuit control system the input signal (set value) is converted into the output value (actual value) in the control unit. There is no monitoring of the correctness of the output value and no guarantee that the set value and the actual value really agree. The effects of external disturbing influences on the system are not taken into account.

Controlled Pressure Regulators from HOERBIGER-ORIGA

In the *airfit control* programme, the *airfit tecno OEM* and *airfit SRT* and *CRT* operate as controlled systems.

Taking the function of the *airfit SRT* as an example: When a set value is defined via the input signal (e.g. 0–10 V), the pressure regulator sets the corresponding output pressure (e.g. 0–10 bar). This output pressure is not however monitored by the unit, i.e. there is no compensation for influences such as air usage or hysteresis of the regulator. Therefore, these units are designed primarily for integration into control systems which include monitoring of the output pressure.

The Regulation System – Closed Circuit Control

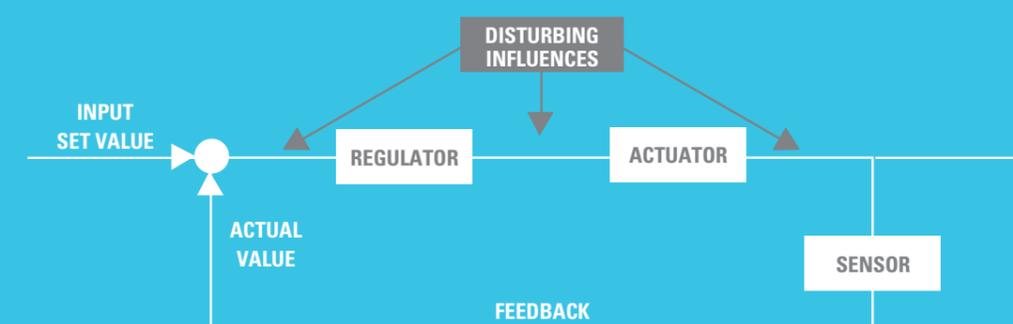

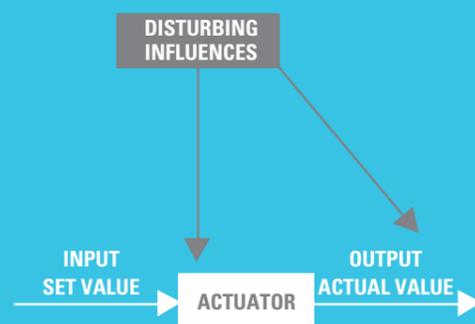

A regulation system is a closed circuit. The input signal (set value) is converted into the output value (actual value) - as in control systems - but this output value is continuously measured and compared with the input signal. If they are different, the regulation unit intervenes and adjusts the output value to correspond to the set value.

Regulated Pressure Regulators from HOERBIGER-ORIGA

The *airfit tecno*, *airfit SRE* and *CRE* are regulated systems. Taking the function of the *airfit SRE* as an example: When a set value is defined via the input signal (e.g. 0–10 V), the pressure regulator sets the corresponding output pressure (e.g. 0–10 bar). At the same time the integrated pressure sensor measures the actual pressure at the unit's outlet (actual value). If the electronic regulation system finds that the actual value has deviated from the set value, it immediately corrects the actual value. This process goes on continuously and ensures fast, accurate pressure regulation.

Regulation system in the paper industry

RELIABLE SERVICE FOR LONG-TERM CUSTOMER SATISFACTION

With over 30 years' expertise in the design, development and manufacture of compressed air preparation systems, HOERBIGER-ORIGA is a specialist supplier of high quality control, regulation, filtration and centralised systems for comprehensive compressed air management.

Customer service is our highest priority, matching the needs of our customer with quality products and support. An internationally active company, we place special value on long-term partnerships.

Our service includes:

- 50 locations worldwide offering service and support
- CAD catalogues
- Technical documentation in several languages
- Training

Private Label: *airfit control* with your corporate identity

The *airfit control* pressure regulators are flexible in terms of colour and imprint and may be supplied in your own company livery, thereby contributing significantly to your company profile.

INNOVATIVE BY TRADITION

It was an innovation which began the story of HOERBIGER International - and one which made a decisive contribution to the development of the industry of today. In 1895 Hanns Hörbiger invented the low-mass, frictionless-guided steel plate valve. With this he opened the door to modern high pressure chemistry, plastics technology and process engineering.

Over one hundred years later, the company has grown into a worldwide group with some 3500 employees. Its current activities are grouped under three Strategic Business Units: Compressor Technology, Drive Technology and Automation Technology.

Within the Automation Technology Strategic Business Unit, HOERBIGER-ORIGA operates in Wiener Neustadt, Austria, as the Competence Centre for Compressed Air Preparation and in Schongau, Germany, as the Competence Centre for Interface-Pneumatic (Piezo technology).
