## SMT16B series

Dry & submersible screw pumps  
for industrial applications - 40 bar pressure

### Three screw pumps

Three screw pumps represent the largest class of multiple screw pumps in service today. No matter the applications and the environmental conditions, three screw pump is the most flexible pump on the market.

Well known to be very reliable, at reasonable cost, virtually pulsation-free flow, very low acoustic emissions, three screw pumps are extensively used in meeting the requirements of oil & gas, chemical, marine, industrial, mobile, alternative energy, food processing, paper, power gen, pharmaceutical and many other industries.

**SMT16B** three screw pumps represent one of the most used pumps all over the world after thirty five years of experience. **SMT16B** has been designed to reduce the dimensions of the traditional **SMT** series in order to be ideal where reduced dimensions are a must.

### Le pompe a tre viti

*Le pompe a tre viti, oggi, rappresentano la classe di pompe a viti maggiormente utilizzate, indipendentemente dal tipo di applicazione e dalle condizioni ambientali, in quanto sono le più flessibili sul mercato. Sono considerate le più affidabili, a prezzi ragionevoli, e raggiungono bassissimi livelli di emissioni acustiche e assenza di vibrazioni nella trasmissione del flusso. Le pompe a tre viti sono ampiamente utilizzate in quanto rispettano i requisiti di settori quali oil & gas, chimico, navale, mobile, agroalimentare, power generation ed energie alternative, industria della carta, industria farmaceutica e molte altre.*

*Le pompe a tre viti della serie **SMT16B**, sono tra le più usate in tutto il mondo e vantano oltre trent'anni di esperienza. Le pompe **SMT16B** sono state progettate per ridurre gli ingombri, in quanto le dimensioni sono minori rispetto alle tradizionali pompe **SMT**.*

### No pulsation – smooth flow

#### Low noise

**SMT16B** three screw pumps are designed to avoid any pulsation, to ensure a smooth operation and to reduce to the lowest level the acoustic emissions, reducing all costs of second noise reduction measures.

The pulsation-free flow of **SMT16B** pumps, allows Settima screw pumps also in output condition management critical to applications such as precision hydraulic controls and fuel metering.

**SMT16B** pump is a priming pump assembled into a pump body. The three screws rotate inside the pump body and the design of the screws avoids any axial load. The functional pressure develops some tolerance between the balancing piston of the main screw and the surrounding body.

This creates a balancing hydrodynamic force on the screws and, at the same time, lubricates and cools down the sealing ports. The torque needed to move the lateral screws is transmitted hydraulically by the pumped fluid, which means that the screws rotate with no possibilities of wearing.

The geometric design of the three screws creates sealing chambers. During the rotation of the three screws, the main one creates a sort of cavity that holds the fluid and drives it with an axial direction from the inlet to the outlet port.

### Flusso omogeneo – Nessuna pulsazione

#### Basse emissioni acustiche

*Le pompe a tre viti della serie **SMT16B** sono progettate per eliminare le pulsazioni, assicurare un funzionamento omogeneo e ridurre al minimo le emissioni acustiche, riducendo in questo modo i costi legati alla necessità di ricorrere a misure secondarie per la riduzione del rumore.*

*Il flusso privo di pulsazioni delle pompe **SMT16B**, permette l'applicazione delle pompe Settima anche in condizioni critiche, come ad esempio idraulica di precisione, dosaggio e misurazione di carburanti.*

*La **SMT16B** è una pompa di adescamento assemblata in un corpo pompa: le tre viti ruotano all'interno del corpo e la progettazione delle stesse è studiata per evitare qualsiasi carico assiale. A seconda della pressione di funzionamento, si sviluppa una certa tolleranza tra il pistone di bilanciamento della vite e il corpo principale circostante. Questo crea una forza idrodinamica di bilanciamento delle viti e al tempo stesso lubrifica e raffredda le parti di tenuta. La coppia necessaria per muovere le viti laterali è trasmessa idraulicamente dal fluido pompato, questo significa che le viti ruotano senza possibilità di usura. Il profilo geometrico delle tre viti crea camere di tenuta. Durante*

## SMT16B pump series / Serie SMT16B

la rotazione delle viti, la principale crea una sorta di cavità che contiene il fluido e lo spinge con direzione assiale dal condotto di ingresso a quello di uscita.

### SMT16B Applications

**SMT16B** pumps have a very large field of applications. The well proven **SMT16B** technology delivers many different kinds of fluids in a wide variety of demanding industrial applications such as: crude oil transport, power generation, lube and seal oil services, hydraulic elevator, fuel oil transport & burner service, power hydraulics, food, machinery lubrication, commercial marine and Navy, refineries and petrochemical services, chemical processing and more.

**SMT16B** pump is suitable for customization and for special applications such as marine, oil & gas etc.

### SMT16B – Applicazioni

L'affermata tecnologia delle pompe **SMT16B** le rende adatte al trasferimento di diversi tipi di fluidi in varie applicazioni e in molteplici settori industriali, quali ad esempio: crude oil transport, power generation, lubrificazione e seal oil services, ascensori ed elevatori idraulici, fuel oil transport & burner service, idraulica di potenza, industria agroalimentare, lubrificazione macchinari, imbarcazioni commerciali e navale, raffinerie e industria petrolchimica, chimica e molti altri.

Le pompe **SMT16B** possono essere personalizzate e sono adatte a rispondere ai requisiti necessari per applicazioni speciali quali navale, oil & gas ecc.

### SMT16B Fluid handlings

**SMT16B** pumps can handle a large variety of fluids, due to the technology itself. From any kind of oil, mineral and synthetic, to emulsions, high viscosity fuel, petrol, polymer, isocyanates, diesel, liquid food and so on.

### SMT16B Movimento fluidi

Le pompe **SMT16B** sono adatte al trasporto di un'ampia varietà di fluidi, grazie alla loro tecnologia: a partire da qualsiasi tipo di olio, minerale o sintetico, alle emulsioni, ai combustibili ad elevata viscosità, petrolio, polimero, isocianato, diesel, fluidi agroalimentari e molti altri.

### Magnetic coupling sealless leakage free pumps - FGM option

**SMT16B** pump can be equipped with a magnetic coupling if required. The hermetically sealed magnetic coupling is a permanent magnetic synchronous coupling able to transmit torque through magnetic forces between the internal and external rotor. Applying a magnetic coupling, the drive and the driven sides are hermetically separated. In case of critical media the magnetic coupling is a reliable seal and avoids any serious leaking.

The magnetic coupling is the containment shroud that is fixed to the driven sided power unit and separates internal and external rotor from each other. Due to the absence of mechanical connection the vibrations torque transmission are very low, with completely leak-proof separation of product and atmosphere.

The magnetic coupling is used to ensure no media leaking or when working in environments with potentially explosive atmospheres.

### Giunto magnetico senza tenute rotanti assenza di perdite garantita - Opzione FGM

Le pompe **SMT16B** possono, su richiesta, essere dotate di giunto magnetico. Il giunto magnetico permette di sigillare l'accoppiamento che trasmette la coppia tra il rotore interno ed esterno tramite forza magnetica. Con l'applicazione del giunto magnetico, l'elemento di trasmissione e quello condotto sono ermeticamente separati. In caso di fluidi pericolosi, il giunto magnetico garantisce una tenuta affidabile che impedisce perdite. Il giunto magnetico consiste nella copertura fissata sull'elemento condotto che separa il rotore interno da quello esterno. Grazie all'assenza di connessioni meccaniche, le vibrazioni dovute alla trasmissione di potenza sono molto ridotte, senza possibilità di contaminazione dell'atmosfera da parte del fluido e viceversa. Il giunto magnetico è utilizzato per prevenire in modo sicuro perdite in ambienti con atmosfera potenzialmente esplosiva.

## INDUSTRIAL

Lube services  
Power hydraulics (presses, machine tools, working machines rolling mill, dumping equipment, elevators, variable pitch propellers, hydraulic winches)  
Power unit & mini power packs  
Hydraulic governors  
Cooling, heating, recycling  
Driving and filtering  
Process technology and chemistry  
Filtration applications  
Chip conveyors  
Hydro power (turbines & compressor lubrication power)  
Paper & Pulp (lubrication & filtration)  
Gear box lube and filtration system (high viscosity lube, air emulsion)

## POWER GENERATION

Lube oil service  
Control oil service  
Sealing oil service for gas turbine  
Fuel unloading station  
Fuel transfer  
Fuel feeding  
Burner operations service  
Filtration & cooling

## MARINE

Off-line filtration  
Off-line filtration cart and trolleys  
Filtration & oil transfer  
Fuel service  
Lube oil circulation service  
Lubricating liquids (machines, turbines, gear sets, motors)

## OIL & GAS

Oil filtration & cooling  
Oil and fuel oil lubrication  
Oil rigs  
Refineries (transport, meter and mix)  
Off-shore platform  
Petrochemical industry  
Transfer service

## Technical characteristics / Caratteristiche tecniche

<b>Types</b> <i>Tipi</i>	Dry (SMT16B) or submerged (SMIT16B) <i>Esterno (SMT16B) o sommerso (SMIT16B)</i>	
<b>Models</b> <i>Modelli</i>	20 – 25 – 32 – 40 – 45 – 55 – 60 – 70 – 80 – 90 – 110	
<b>Installation</b> <i>Installazione</i>	Free for SMT16B. Submerged (totally or partially) for SMIT16B <i>Qualsiasi per SMT16B. Sommersa (parzialmente o completamente) per SMIT16B</i>

## Suction and drain configuration / Configurazioni aspiraz. e drenaggio

Suction and drain hole configuration available as per table below (orientations relative to pressure port).

*Configurazioni di porte di aspirazione, mandata e drenaggio. Vedi tabella sotto.*

### Standard configuration / Configurazioni standard

Standard configuration: T1 – D2

*Configurazione standard: T1 – D2*

Standard configuration for pumps WITH RP VALVE: T4 – D2

*Configurazione standard per pompa CON VALVOLA RP: T4 – D2*

SUCTION CONFIGURATION CODES CODICI CONFIGURAZIONE ASPIRAZIONE	DRAIN CONFIGURATION CODES CODICI CONFIGURAZIONE DRENAGGIO
 <p><b>T1</b></p>	 <p><b>D1</b></p>
 <p><b>T2</b></p>	 <p><b>D2</b></p>
 <p><b>T3</b></p>	 <p><b>D3</b></p>
 <p><b>T4</b></p>	 <p><b>D4</b></p>

Settima recommends that in case of request of pump with RP valve (external variable regulation valve), it is necessary to choose very carefully the suction and drain configuration. Once the external valve is built on the pump it will be not possible any change of both configurations.

*Settima raccomanda di scegliere attentamente la configurazione delle porte nel caso di pompa con valvola RP (valvola regolazione variabile esterna). La valvola RP impedisce di modificare l'orientamento delle porte una volta installata sulla pompa.*

## Motor pump selection / Selezione motore

Please check the table below to select the right motor.

Controllare la tabella per selezionare il motore adatto.
